A series of `vkCmdxxx()` calls are meant to run “flat-out”, that is, as fast as the Vulkan runtime can get them executing. But, many times, that is not desirable because the output of one command might be needed as the input to a subsequent command.

Pipeline Barriers solve this problem by declaring which stages of the hardware pipeline in subsequent `vkCmdyyy()` calls need to wait until which stages in previous `vkCmdxxx()` calls are completed.

1. Read-after-Write (R-a-W) – the memory write in one operation starts overwriting the memory that another operation's read needs to use.
2. Write-after-Read (W-a-R) – the memory read in one operation hasn't yet finished before another operation starts overwriting that memory.
3. Write-after-Write (W-a-W) – two operations start overwriting the same memory and the end result is non-deterministic.

Note: there is no problem with Read-after-Read (R-a-R) as no data gets changed.

vkCmdPipelineBarrier() Function Call

A **Pipeline Barrier** is a way to establish a dependency between commands that were submitted before the barrier and commands that are submitted after the barrier

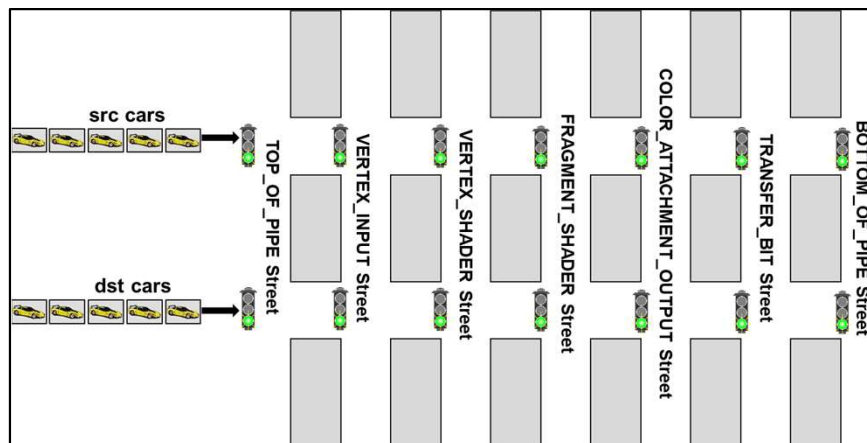

The hope is maximize the number of unblocked stages:
produce data *early* and consume data *late*

The Scenario

1. The cross-streets are named after pipeline stages
2. All traffic lights start out green
3. There are special sensors at all intersections that will know when **any car in the src group** is in that intersection
4. There are connections from those sensors to the traffic lights so that when **any car in the src group** is in the intersection, the proper **dst** traffic lights will be turned red
5. When the **last car in the src group** completely makes it through its intersection, the proper **dst** traffic lights are turned back to green
6. The Vulkan command pipeline ordering is this: (1) the **src** cars get released by the previous vkCmdxxx, (2) the pipeline barrier is invoked (which turns some lights red), (3) the **dst** cars get released by the next vkCmdyyy, (4) the **dst** cars stop at the red light, (5) the **src** cars clear the intersection, (6) the **dst** lights turn green, (6) the **dst** cars continue.

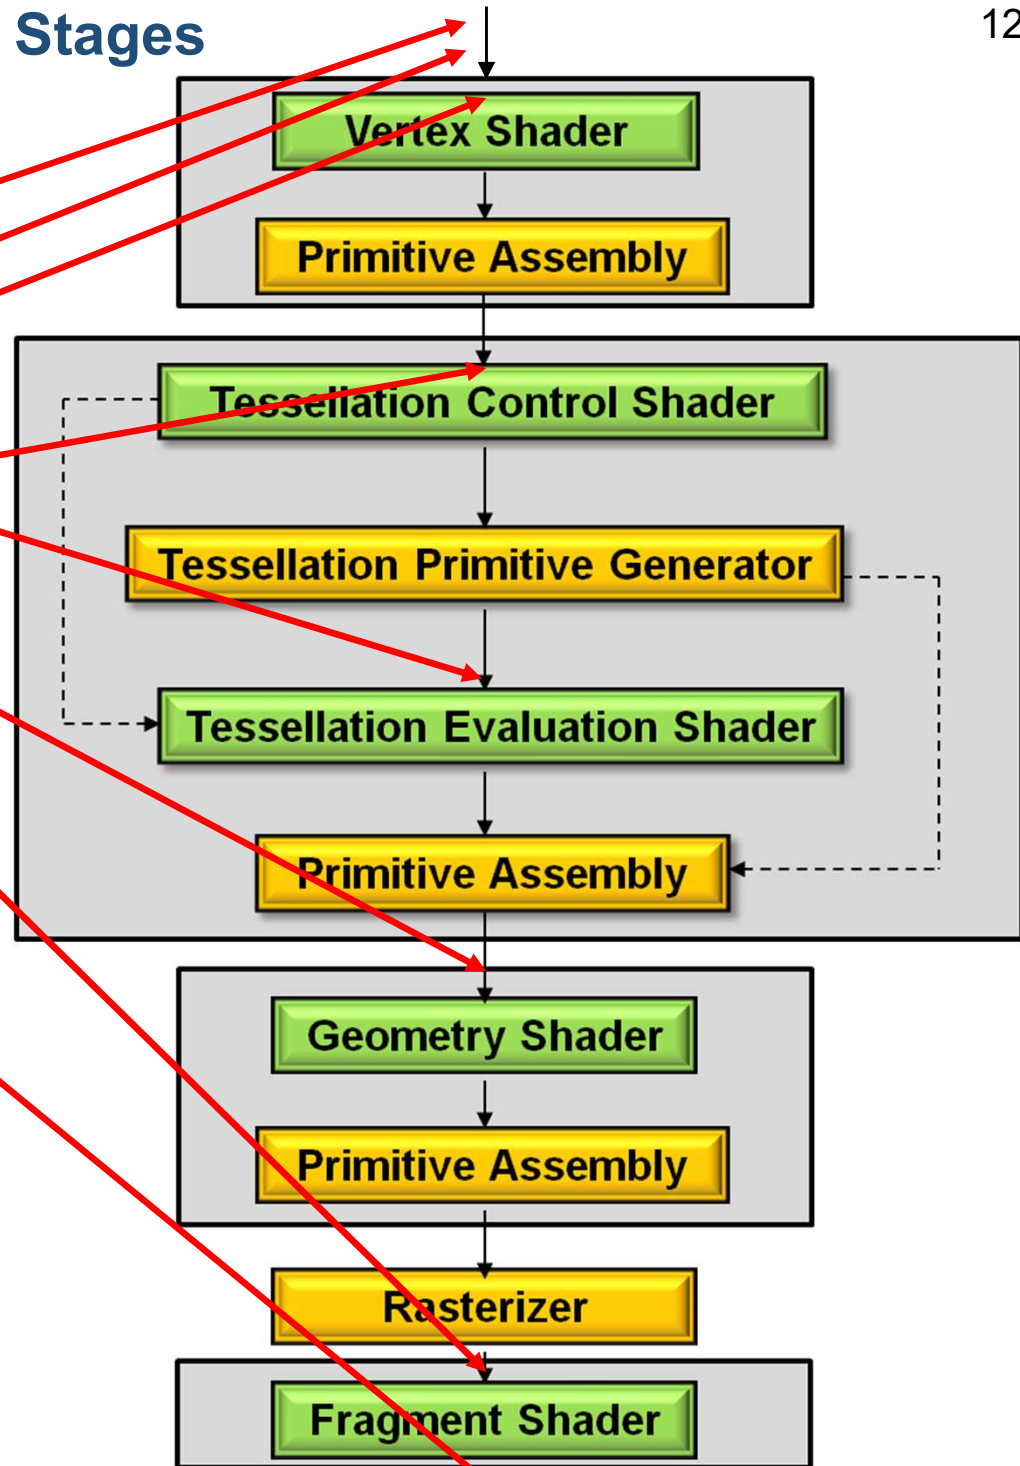

Pipeline Stage Masks – Where in the Pipeline is this Memory Data being Generated or Consumed?

Example #1: Be sure we are done writing an Output image before using it as a Fragment Shader Texture

Example #1: The Scenario

src cars are
generating the image

dst cars are
waiting to use that
image as a texture

Example #2: Setting a Pipeline Barrier so the Drawing Waits for the Compute Shader to Finish

```
VkBufferMemoryBarrier          vbmb;  
    vbmb.sType = VK_STRUCTURE_TYPE_BUFFER_MEMORY_BARRIER;  
    vbmb.pNext = nullptr;  
    vbmb.srcAccessFlags = VK_ACCESS_SHADER_WRITE_BIT;  
    vbmb.dstAccessFlags = VK_ACCESS_SHADER_READ_BIT;  
    vbmb.srcQueueFamilyIndex = 0;  
    vbmb.dstQueueFamilyIndex = 0;  
    vbmb.buffer =  
    vbmb.offset = 0;  
    vbmb.size = NUM_PARTICLES * sizeof( glm::vec4 );
```

```
const uint32 bufferMemoryBarrierCount = 1;
```

vkCmdPipelineBarrier

```
(  
    commandBuffer,  
    VK_PIPELINE_STAGE_COMPUTE_SHADER_BIT,  
    VK_PIPELINE_STAGE_VERTEX_SHADER_BIT,  
    VK_DEPENDENCY_BY_REGION_BIT,  
    0, nullptr, bufferMemoryBarrierCount, IN &vbmb, 0, nullptr  
);
```

Example #2: Setting a Pipeline Barrier so the Compute Shader Waits for the Drawing to Finish

```
VkBufferMemoryBarrier          vbmb;  
    vbmb.sType = VK_STRUCTURE_TYPE_BUFFER_MEMORY_BARRIER;  
    vbmb.pNext = nullptr;  
    vbmb.srcAccessFlags = VK_ACCESS_SHADER_WRITE_BIT;  
    vbmb.dstAccessFlags = VK_ACCESS_SHADER_READ_BIT;  
    vbmb.srcQueueFamilyIndex = 0;  
    vbmb.dstQueueFamilyIndex = 0;  
    vbmb.buffer =  
    vbmb.offset = 0;  
    vbmb.size = NUM_PARTICLES * sizeof( glm::vec4 );
```

```
const uint32 bufferMemoryBarrierCount = 1;
```

```
vkCmdPipelineBarrier
```

```
(  
    commandBuffer,  
    VK_PIPELINE_STAGE_FRAGMENT_SHADER_BIT,  
    VK_PIPELINE_STAGE_COMPUTE_SHADER_BIT,  
    VK_DEPENDENCY_BY_REGION_BIT,  
    0, nullptr, bufferMemoryBarrierCount, IN &vbmb, 0, nullptr  
);
```
