

Concepts of
Programming
Languages, 4th Ed

*Chapter 1:
Preliminaries*

OSU
OREGON STATE
UNIVERSITY
Open mind. Open doors.

CS 381 Chapter 1 1

Reasons to study concepts of
Programming Languages

1. **Increased capacity to express programming concepts**
2. **Improved background for choosing appropriate languages**
3. **Increased ability to learn new languages**
4. **Understanding the significance of implementation**
5. **Increased ability to design new languages**
6. **Overall advancement of computing**

CS 381 Chapter 1 2

Programming Domains

1. **Scientific applications**
2. **Business applications**
3. **Artificial intelligence**
4. **Systems programming**
5. **Scripting languages**
6. **Special purpose languages**

CS 381 Chapter 1 3

Language Evaluation Criteria
1. Readability

The most important criterium

Factors:

- Overall simplicity
 - *Too many features is bad*
 - *Multiplicity of features is bad*
- Orthogonality
 - *Makes the language easy to learn and read*
- *Meaning is context independent*
- Control statements
- Data type and structures
- Syntax considerations

OREGON STATE UNIVERSITY

CS 381 Chapter 1 4

Language Evaluation Criteria
2. Writability

Factors:

- Simplicity and orthogonality
- Support for abstraction
- Expressivity

OREGON STATE UNIVERSITY
Open mind. Open doors.

CS 381 Chapter 1 5

Language Evaluation Criteria
3. Reliability

Factors:

- Type checking
- Exception handling
- Aliasing
- Readability and writability

OREGON STATE UNIVERSITY
Open mind. Open doors.

CS 381 Chapter 1 6

Language Evaluation Criteria
4. *Cost*

- **Categories**
 - Programmer training
 - Software creation
 - Compilation
 - Execution
 - Compiler cost
 - Poor reliability
 - Maintenance

OREGON STATE UNIVERSITY
Open mind. Open doors.

CS 381 Chapter 1 7

Language Evaluation Criteria
5. *Other Criteria*

- portability
- generality
- well-definedness

OREGON STATE UNIVERSITY
Open mind. Open doors.

CS 381 Chapter 1 8

Primary influences on language design

1. **Computer architecture**
 - We use imperative languages, at least in part, because we use von Neumann machines
2. **Programming methodologies**
 - 1950s and early 1960s: Simple applications; worry about machine efficiency
 - Late 1960s: People efficiency became important; readability, better control structures
 - Late 1970s: Data abstraction
 - Middle 1980s: Object-oriented programming

OREGON STATE UNIVERSITY
Open mind. Open doors.

CS 381 Chapter 1 9

Language Categories

1. Imperative
2. Functional
3. Logic
4. Object-oriented (closely related to imperative)

CS 381 Chapter 1 10

Language Design Trade-Offs

1. Reliability versus cost of execution
2. Writability versus readability
3. Flexibility versus safety

OSU
OREGON STATE UNIVERSITY
Open mind. Open doors.

CS 381 Chapter 1 11

Implementation Methods

1. Compilation
 - Translate high-level program to machine code
 - Slow translation
 - Fast execution
2. Pure interpretation
 - No translation
 - Slow execution
 - Becoming rare
3. Hybrid implementation systems
 - Small translation cost
 - Medium execution speed

OREGON STATE UNIVERSITY
Open mind. Open doors.

CS 381 Chapter 1 12

Programming Environments

-The collection of tools used in software development

1. UNIX
 - An old operating system and tool collection
2. Borland C++
 - A PC environment for C and C++
3. Smalltalk
 - A language processor/environment
4. Microsoft Visual C++
 - A large, complex visual environment
