Particle Systems

• Are used to simulate the appearance of particulate, hairy, or fuzzy phenomena.
• Involve the animation of large collections of (perhaps tiny) particles which have various graphics characteristics.
• Were originally developed by Pixar’s Bill Reeves for the “Genesis Sequence” in the movie Star Trek II: The Wrath of Khan.
• Have been used to create effects of fire, smoke, rain, snow, fireworks, disintegration, dust, sand, explosions, flow, waterfalls, stars, comets, plants, hair, fuzz. Surely many more.

Particle Systems Examples

“Particles” Don’t Actually Have to Be Particles

The Lion King (2019) – Disney
The basic process is this:

1. Random Number Generator
2. Emit
3. Display
4. Update

The Emitter gives each particle a:
- Birth time
- Death time
- Start location
- Start velocity
- Start color
- Start size
- Start alpha (blending factor)

Plus, any information about how these quantities change over time.

The Displayer
- Dots
- Small line segments
- Polygons with billboarding
- Quads with textures and billboarding
- Sprites
- Spheres, Cubes
- "Rockets"
- Lighting
- Blending
- Smearing

Creating Random Values for the Emitter

```c
#include <stdlib.h>

float Randf(float low, float high)
{
    float r = (float) rand(); // 0 - RAND_MAX
    float t = r / (float) RAND_MAX; // 0. – 1.
    return low + t * (high - low);
}

int Randi(int ilow, int ihigh)
{
    float low = (float) ilow;
    float high = ceil((float) ihigh);
    return (int) Randf(low, high);
}
```

OpenDX Scalar Glyphs

- Square
- Circle
- Diamond
- Cube
- Sphere

OpenDX Vector Glyphs

- Needle
- Arrow
- Rocket
Billboarding

Apply the proper rotation about the proper axis such that the plane’s surface normal is always pointed towards the eye. The eye always sees the surface head-on. Besides particle systems, this is often used to create the appearance of 3D trees from 2D tree images.

\[ A = \hat{n} \times \hat{E} \]
\[ \theta = \cos^{-1} (\hat{n} \cdot \hat{E}) \]

Sprites

A “sprite” is a 3D object pre-rendered to a flat 2D texture and “slipped” into a certain depth in the scene.

The Updater

And the simulation updates the:

- Position
- Color
- Size
- Alpha
- Interaction with other particles and other objects

Note that these can change as a function of time, position, or anything else
