## Identify the Light Source Casting the Shadow

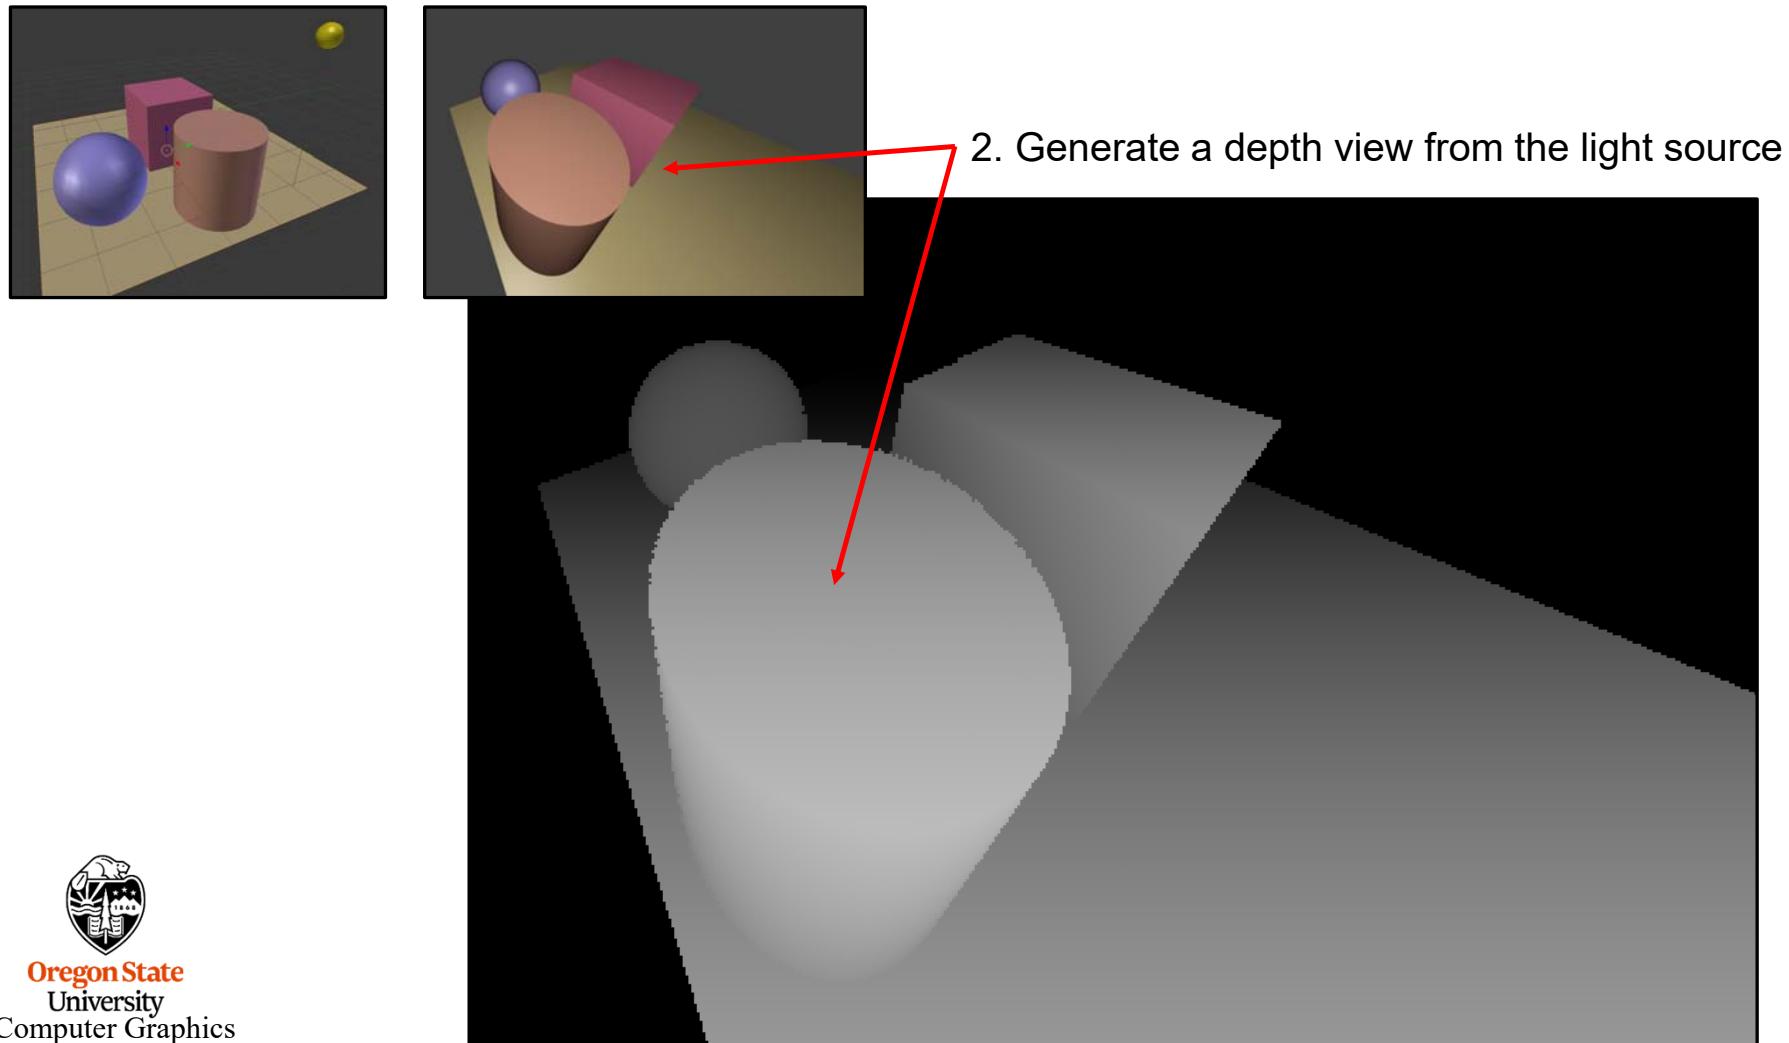

## First, Render the Scene from that Light Source

1. Render a view from the light source – everything you cannot see must be in a shadow

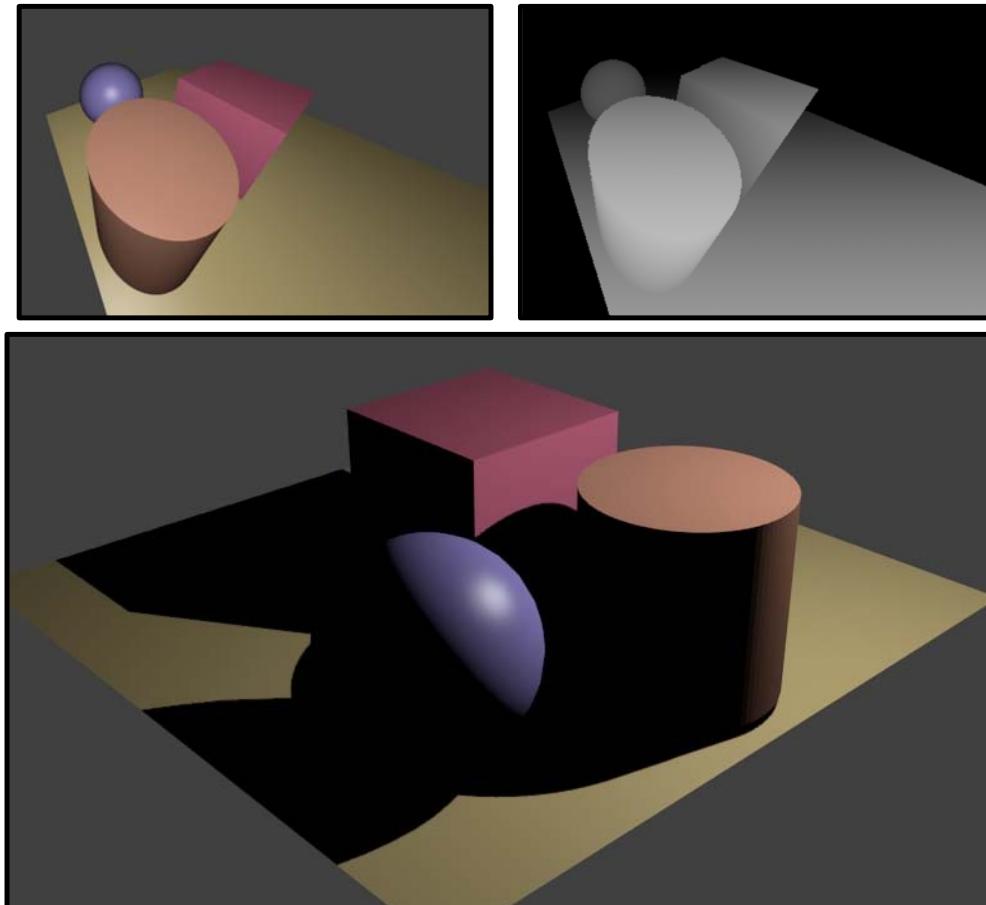

## Use the Z-buffer as a Depth Shadow Map

## Second, Render the Scene as Normal, but Consult the Depth Map to Decide where Lighting Applies

3. Put the eye back where it really belongs. Render that view. Every time you create a pixel in the scene, compare its 3D location against the depth map. If the light-position camera could not see it before, don't allow lighting to be applied to it now.

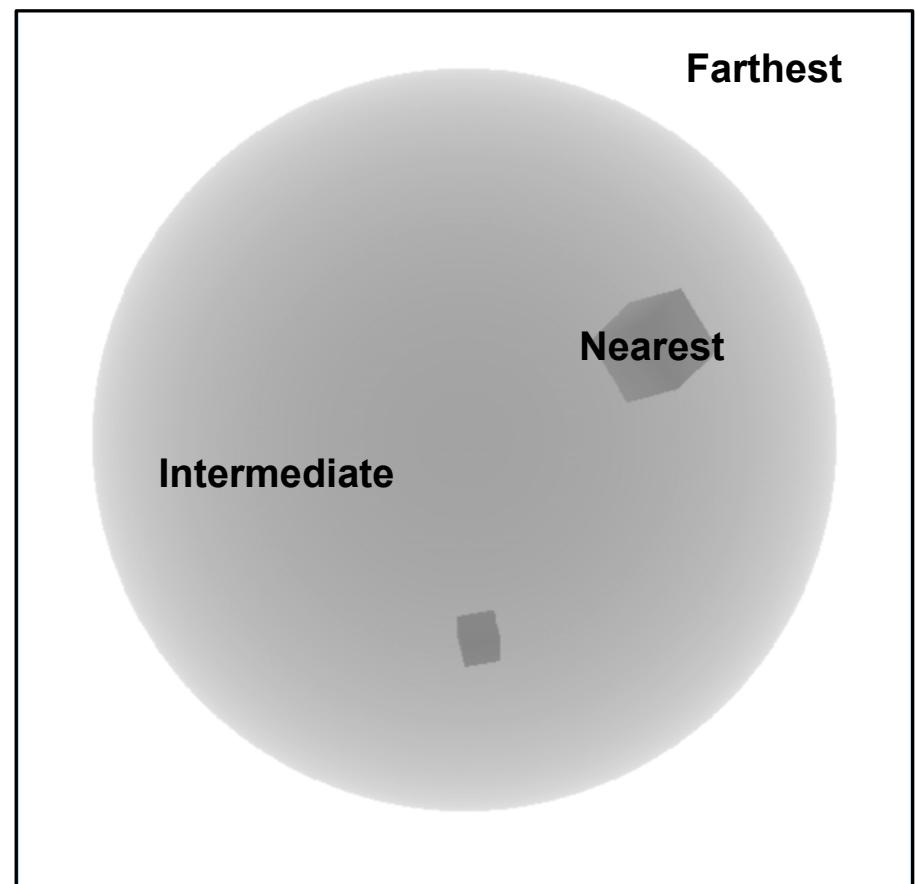

## OpenGL Demo Program: The Depth Shadow Map

The depth shadow map is created from the point of view of the light source.

The rendering is done into a texture and only renders the depth, not any colors. (Normally, we would render both, but in this case, we only care about the depth.)

In this grayscale depth image, dark colors are nearest to the eye, light colors are farther away.

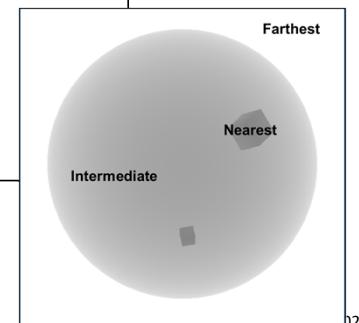

## OpenGL Demo Program: Creating the Off-screen Depth Shadow Map Framebuffer

7

```
// create a framebuffer object and a depth texture object:  
glGenFramebuffers(1, &DepthFramebuffer );  
glGenTextures( 1, &DepthTexture );  
  
//Create a texture that will be the framebuffer's depth buffer  
glBindTexture(GL_TEXTURE_2D, DepthTexture );  
glTexImage2D(GL_TEXTURE_2D, 0, GL_DEPTH_COMPONENT, SHADOW_WIDTH, SHADOW_HEIGHT,  
             0, GL_DEPTH_COMPONENT, GL_FLOAT, NULL);  
glTexParameteri(GL_TEXTURE_2D, GL_TEXTURE_MIN_FILTER, GL_NEAREST);  
glTexParameteri(GL_TEXTURE_2D, GL_TEXTURE_MAG_FILTER, GL_NEAREST);  
glTexParameteri(GL_TEXTURE_2D, GL_TEXTURE_WRAP_S, GL_CLAMP_TO_EDGE);  
glTexParameteri(GL_TEXTURE_2D, GL_TEXTURE_WRAP_T, GL_CLAMP_TO_EDGE);  
  
// attach texture to the current framebuffer asa depth buffer:  
glBindFramebuffer(GL_FRAMEBUFFER, DepthFramebuffer);  
glFramebufferTexture2D(GL_FRAMEBUFFER, GL_DEPTH_ATTACHMENT, GL_TEXTURE_2D, DepthTexture, 0);  
  
// force opengl to accept a framebuffer that doesn't have a color buffer in it:  
glDrawBuffer(GL_NONE);  
glReadBuffer(GL_NONE);
```

In shadows.cpp:  
InitGraphics( )

## OpenGL Demo Program: Rendering into the Depth Shadow Map

```
//first pass, render from light's perspective, store depth of scene in texture
glBindFramebuffer(GL_FRAMEBUFFER, DepthFramebuffer);
glClear(GL_DEPTH_BUFFER_BIT);
glDrawBuffer(GL_NONE);
glReadBuffer(GL_NONE);
glEnable(GL_DEPTH_TEST);
glShadeModel(GL_FLAT);
glDisable(GL_NORMALIZE);

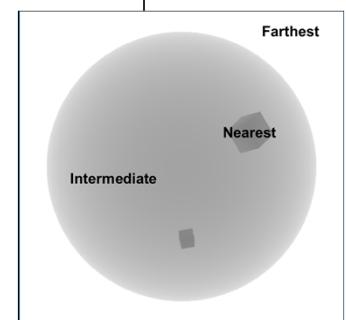

// these matrices are the equivalent of projection and view matrices:
glm::mat4 lightProjection = glm::ortho( -10.0f, 10.0f, -10.0f, 10.0f, 1.f, 20.f );
glm::vec3 lightPos( LightX, LightY, LightZ );
glm::mat4 lightView = glm::lookAt( lightPos, glm::vec3(0., 0., 0.), glm::vec3(0., 1., 0.) );

//this matrix is the transformation matrix that the vertex shader will use instead of glModelViewProjectionMatrix:
glm::mat4 lightSpaceMatrix = lightProjection * lightView;

glViewport(0, 0, SHADOW_WIDTH, SHADOW_HEIGHT);

GetDepth->Use();
GetDepth->SetUniformVariable((char*)"uLightSpaceMatrix", lightSpaceMatrix);
glm::vec3 color = glm::vec3(0., 1., 1.);
GetDepth->SetUniformVariable((char*)"uColor", color);
DisplayOneScene(GetDepth);
GetDepth->Use(0);
glBindFramebuffer(GL_FRAMEBUFFER, 0);
```

In shadows.cpp:  
Display, I

## OpenGL Demo Program: Rendering into the Depth Shadow Map

```
uniform mat4 uAnim;  
uniform mat4 uLightSpaceMatrix;  
  
void  
main( )  
{  
    gl_Position = uLightSpaceMatrix * uAnim * gl_Vertex;  
}
```

**GetDepth.vert**

```
uniform vec3 uColor;  
  
void  
main( )  
{  
    gl_FragColor = vec4(uColor, 1.); // really doesn't matter...  
}
```

**GetDepth.frag**

## OpenGL Demo Program: Rendering using the Depth Shadow Map

```

RenderWithShadows->Use();
RenderWithShadows->SetUniformVariable((char*)"uShadowMap", 0 );
RenderWithShadows->SetUniformVariable((char*)"uLightX", LightX);
RenderWithShadows->SetUniformVariable((char*)"uLightY", LightY);
RenderWithShadows->SetUniformVariable((char*)"uLightZ", LightZ);
RenderWithShadows->SetUniformVariable((char*)"uLightSpaceMatrix", lightSpaceMatrix);

glm::vec3 eye = glm::vec3(0., 0., 8.);
glm::vec3 look = glm::vec3(0., 0., 0.);
glm::vec3 up = glm::vec3(0., 1., 0.);
glm::mat4 modelview = glm::lookAt(eye, look, up);
glm::vec3 xaxis = glm::vec3(1., 0., 0.);
glm::vec3 yaxis = glm::vec3(0., 1., 0.);
modelview = glm::rotate(modelview glm::radians(Yrot), yaxis);
modelview = glm::rotate(modelview, glm::radians(Xrot), xaxis);
glm::vec3 scale = glm::vec3(Scale, Scale, Scale);
modelview = glm::scale(modelview, scale);
RenderWithShadows->SetUniformVariable((char*)"uModelView", modelview);

glm::mat4 proj = glm::perspective(glm::radians(75.f), 1.f, .1f, 100.f);
RenderWithShadows->SetUniformVariable((char*)"uProj", proj);
DisplayOneScene(RenderWithShadows);
RenderWithShadows->Use(0);

```

In **shadows.cpp:**  
**Display, II**

## OpenGL Demo Program: Rendering using the Depth Shadow Map

```

void
DisplayOneScene(GLSLProgram * prog )
{
    //render a sphere:
    glm::mat4 anim = glm::mat4(1.f);
    prog->SetUniformVariable((char*)"uAnim", anim);
    glm::vec3 color = glm::vec3(1., 1., 0.);
    prog->SetUniformVariable((char*)"uColor", color );
    glCallList(SphereList);

    //Render cubes:
    anim = glm::mat4(1.f);
    anim = glm::translate(anim, glm::vec3(-1., 2.5 + 2.f * sin(M_PI * Time), 6.f));
    anim = glm::scale(anim, glm::vec3(0.5));
    prog->SetUniformVariable((char*)"uAnim", anim);
    color = glm::vec3(1., 0., 0.);
    prog->SetUniformVariable((char*)"uColor", color );
    glutSolidCube(1.);

    anim = glm::mat4(1.f);
    model = glm::translate(anim, glm::vec3(2.0f, 6.0f, 3.0));
    float angle = (float)(45.f * 2.f * sin(M_PI * Time));
    anim = glm::rotate(anim, glm::radians(angle), glm::normalize(glm::vec3(1.0, 0.0, 1.0)));
    anim = glm::scale(anim, glm::vec3(0.5f));
    prog->SetUniformVariable((char*)"uAnim", anim);
    color = glm::vec3(0., 1., 0.);
    prog->SetUniformVariable((char*)"uColor", color);
    glutSolidCube(2.);

    prog->Use(0);
}

```

In shadows.cpp:  
**DisplayOneScene**

## OpenGL Demo Program: Rendering using the Depth Shadow Map

```

uniform mat4 uLightSpaceMatrix;
uniform mat4 uAnim;
uniform mat4 uModelView;
uniform mat4 uProj;
uniform float uLightX;
uniform float uLightY;
uniform float uLightZ;

mjb - December 31, 2020

## How Did the Demo Program Render that 2D Shadow Map?

```
DisplayShadowMap->Use();
DisplayShadowMap->SetUniformVariable((char*)"uShadowMap", 0 );

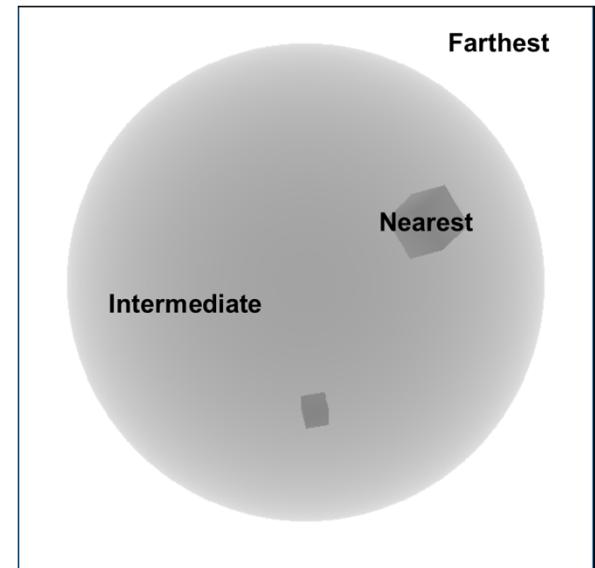

glm::mat4 model = glm::mat4(1.f);
DisplayShadowMap->SetUniformVariable((char*)"uModel", model);

glm::vec3 eye = glm::vec3(0., 0., 1.);
glm::vec3 look = glm::vec3(0., 0., 0.);
glm::vec3 up = glm::vec3(0., 1., 0.);
glm::mat4 view = glm::lookAt(eye, look, up);
DisplayShadowMap->SetUniformVariable((char*)"uView", view);

glm::mat4 proj = glm::ortho(-0.6f, 0.6f, -0.6f, 0.6f, .1f, 100.f);
DisplayShadowMap->SetUniformVariable((char*)"uProj", proj);

glBegin(GL_QUADS);
    glTexCoord2f(0., 0.);
    glVertex3f(-1., -1., 0.);
    glTexCoord2f(1., 0.);
    glVertex3f( 1., -1., 0.);
    glTexCoord2f(1., 1.);
    glVertex3f( 1., 1., 0.);
    glTexCoord2f(0., 1.);
    glVertex3f(-1., 1., 0.);
glEnd();
DisplayShadowMap->Use( 0 );
```

Note that this is not a *required* part of a shadows program. I just did that to show you what it would look like.

## How Did the Demo Program Render the 2D Shadow Map?

### DisplayShadowMap.vert

```
uniform mat4 uModel;
uniform mat4 uView;
uniform mat4 uProj;
out vec2 vST;

void
main( )
{
    vST = gl_MultiTexCoord0.st;
    gl_Position = uProj * uView * uModel * gl_Vertex;
}
```

### DisplayShadowMap.frag

```
uniform sampler2D uShadowMap;
in vec2 vST;

void
main( )
{
    float gray = texture(uShadowMap, vST ).r;
    gl_FragColor = vec4( gray, gray, gray, 1. );
}
```
