Setting up Query Pools

There are 3 types of Queries: Occlusion, Pipeline Statistics, and Timestamp

Vulkan requires you to first setup “Query Pools”, some for each specific type

This indicates that Vulkan thinks that Queries are time-consuming (relatively) to setup, and thus better to set them up in program-setup than in program-runtime
Setting up Query Pools

```c
VkQueryPoolCreateInfo vqpci;
    vqpci.sType = VK_STRUCTURE_TYPE_QUERY_POOL_CREATE_INFO;
    vqpci.pNext = nullptr;
    vqpci.flags = 0;
    vqpci.queryType = << one of: >>
        VK_QUERY_TYPE_OCCLUSION
        VK_QUERY_TYPE_PIPELINE_STATISTICS
        VK_QUERY_TYPE_TIMESTAMP
    vqpci.queryCount = 3;
    vqpci.pipelineStatistics = 0; // bitmask of what stats you are querying for if you
                                  // are doing a pipeline statistics query
VkQueryPool occlusionQueryPool;
result = vkCreateQueryPool( LogicalDevice, IN &vqpci, PALLOCATOR, OUT &occlusionQueryPool );

VkQueryPool statisticsQueryPool;
result = vkCreateQueryPool( LogicalDevice, IN &vqpci, PALLOCATOR, OUT &statisticsQueryPool );

VkQueryPool timestampQueryPool;
result = vkCreateQueryPool( LogicalDevice, IN &vqpci, PALLOCATOR, OUT &timestampQueryPool );
```
Resetting, Filling, and Examining a Query Pool

vkCmdResetQueryPool( CommandBuffer, occlusionQueryPool, 0, 3 );

vkCmdBeginQuery( CommandBuffer, occlusionQueryPool, 0, VK_QUERY_CONTROL_PRECISE_BIT );

... 

vkCmdEndQuery( CommandBuffer, occlusionQueryPool, 0 );

result = vkGetQueryPoolResults( LogicalDevice, occlusionQueryPool, 0, 1, DATASIZE, data, stride, flags );
    // VK_QUERY_RESULT_64_BIT
    // VK_QUERY_RESULT_WAIT_BIT
    // VK_QUERY_RESULT_WITH_AVAILABILITY_BIT
    // VK_QUERY_RESULT_PARTIAL_BIT
    // stride is # of bytes in between each result

vkCmdCopyQueryPoolResults( CommandBuffer, occlusionQueryPool, 0, 1, buffer, 0, stride, flags );
    // VK_QUERY_RESULT_64_BIT
    // VK_QUERY_RESULT_WAIT_BIT
    // VK_QUERY_RESULT_WITH_AVAILABILITY_BIT
    // VK_QUERY_RESULT_PARTIAL_BIT
    // stride is # of bytes in between each result
Occlusion Queries count the number of fragments drawn between the vkCmdBeginQuery and the vkCmdEndQuery that pass both the Depth and Stencil tests

This is commonly used to see what level-of-detail should be used when drawing a complicated object

**Some hints:**

- Don’t draw the whole scene – just draw the object you are interested in
- Don’t draw the whole object – just draw a simple bounding volume at least as big as the object
- Don’t draw the whole bounding volume – cull away the back faces (two reasons: time and correctness)
- Don’t draw the colors – just draw the depths (especially if the fragment shader is time-consuming)

```c
uint32_t fragmentCount;
result = vkGetQueryPoolResults( LogicalDevice, occlusionQueryPool, 0, 1,
    sizeof(uint32_t), &fragmentCount, 0, VK_QUERY_RESULT_WAIT_BIT );

vkCmdCopyQueryPoolResults( CommandBuffer, occlusionQueryPool, 0, 1,
    buffer, 0, 0, VK_QUERY_RESULT_WAIT_BIT );
```
Pipeline Statistics Query

Pipeline Statistics Queries count how many of various things get done between the `vkCmdBeginQuery` and the `vkCmdEndQuery`.

```c
uint32_t  counts[NUM_STATS];
result = vkGetQueryPoolResults( LogicalDevice, statisticsQueryPool, 0, 1,
                               NUM_STATS*sizeof(uint32_t), counts, 0, VK_QUERY_RESULT_WAIT_BIT );

vkCmdCopyQueryPoolResults( CommandBuffer, occlusionQueryPool, 0, 1,
                           buffer, 0, 0, VK_QUERY_RESULT_WAIT_BIT );

VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_EVALUATION_SHADER_INVOCATIONS_BIT
VK_QUERY_PIPELINE_STATISTIC_COMPUTE_SHADER_INVOCATIONS_BIT
```
Timestamp Query

Timestamp Queries count how many nanoseconds of time elapsed between the vkCmdBeginQuery and the vkCmdEndQuery.

```c
uint64_t nanosecondsCount;
result = vkGetQueryPoolResults( LogicalDevice, timestampQueryPool, 0, 1,
    sizeof(uint64_t), &nanosecondsCount, 0,
    VK_QUERY_RESULT_64_BIT | VK_QUERY_RESULT_WAIT_BIT);

vkCmdCopyQueryPoolResults( CommandBuffer, timestampQueryPool, 0, 1,
    buffer, 0, 0,
    VK_QUERY_RESULT_64_BIT | VK_QUERY_RESULT_WAIT_BIT );
```
**Timestamp Query**

The `vkCmdWriteTimeStamp()` function produces the time between when this function is called and when the first thing reaches the specified pipeline stage.

Even though the stages are “bits”, you are supposed to only specify one of them.

```c
vkCmdWriteTimeStamp( CommandBuffer, pipelineStages, timestampQueryPool, 0 );
```

```
