Drawing a Sphere – Notice a lot of time-consuming Trig Function Calls!

```c
void Sphere(float radius, int slices, int stacks)
{
    struct point top, bot;  // top, bottom points
    float lat, lng, x, y, z;
    float xz, xhyz;
    float xzcos, xzsin;
    float xcos, xysin;
    for (int ilat = 0; ilat < stacks; ilat++)
    {
        lat = M_PI * ilat / (float)(stacks - 1);
        for (int ilng = 0; ilng < slices; ilng++)
        {
            lng = M_PI * ilng / (float)(slices - 1);
            x = radius * xcos;
            y = radius * xysin;
            z = radius * xzsin;
            xz = xcos;
            xhyz = xycos;
            top.x = 0.;
            top.y = radius;
            top.z = 0.;
            top.nx = 0.;
            top.ny = 1.;
            top.nz = 0.;
            top.s = lng;  // longitude
            top.t = lat;  // latitude
            bot.x = 0.;
            bot.y = -radius;
            bot.z = 0.;
            bot.nx = 0.;
            bot.ny = -1.;
            bot.nz = 0.;
            bot.s = lng;  // longitude
            bot.t = lat;  // latitude
            glBegin(GL_QUADS);
            for (int ilat = 0; ilat < stacks - 1; ilat++)
            {
                p = PtsPointer(ilat - 1, ilng - 1);
                DrawPoint(p);
                p = PtsPointer(ilat - 1, ilng);
                DrawPoint(p);
                p = PtsPointer(ilat, ilng);
                DrawPoint(p);
                p = PtsPointer(ilat + 1, ilng - 1);
                DrawPoint(p);
                glEnd();
            }
            glEnd();
        }
    }
}
Drawing a Sphere – Notice a lot of time-consuming Trig Function Calls!

```
You don't want to execute all that code every time you want to redraw the scene, so draw it once, store the numbers in GPU memory, and call them back up later.

The solution is to incur the sphere-creation overhead once, and whenever the sphere needs to be re-drawn, just draw the saved numbers, not the equations. This is a **Display List**.

1. How many unique, unused, consecutive DL identifiers to give back to

2. The ID of the first DL in the unique, unused list

3. Open up a display list in (GPU) memory

4. The coordinates, etc. end up in memory instead of being sent to the display

5. Stop storing the numbers in the DL

6. Pull all the coordinates, etc. from memory, just as if the code to generate them had been executed here
