OSU’s College of Engineering has six Nvidia DGX-2 systems

Each DGX server:
- Has 16 Nvidia Tesla V100 GPUs
- Has 28TB of disk, all SSD
- Has two 24-core Intel Xeon 8168 Platinum 2.7GHz CPUs
- Has 1.5TB of DDR4-2666 System Memory
- Runs the CentOS 7 Linux operating system

Overall compute power:
- Each V100 Nvidia Tesla card has 5,120 CUDA Cores and 640 Tensor Cores
- This gives each 16-V100 DGX server a total of 81,920 CUDA cores and 10,240 Tensor cores
- This gives the entire 6-DGX package a total of 491,520 CUDA Cores and 61,440 Tensor Cores
Performance Comparison with one of our previous Systems

BTW, you can also use the rabbit machine:

```
ssh rabbit.engr.oregonstate.edu
```

It is a good place to write your code and get it to compile. It is not a good place to do the final run of your code.

How to SSH to the DGX Systems

```
flip3 151% ssh submit-c.hpc.engr.oregonstate.edu

submit-c 142% module load slurm
```

Type this right away to set your path correctly.
How to Check on the DGX Systems

submit-c 144% sinfo

Submitting a CUDA job to the DGX Systems using Slurm

submit.bash:
```bash
#!/bin/bash
#SBATCH  -J  MatrixMult
#SBATCH  -A  cs475-575
#SBATCH  -p  class
#SBATCH  --gres=gpu:1
#SBATCH  -o  matrixmul.out
#SBATCH  -e  matrixmul.err
#SBATCH  --mail-type=BEGIN,END,FAIL
#SBATCH  --mail-user=joeparallel@oregonstate.edu
/usr/local/apps/cuda/cuda-10.1/bin/mvcc -o matrixMul matrixMul.cu
```

submit-c 143% sbatch submit.bash
Submitted batch job 474

submit-c 144% cat matrixmul.err

Check on the queues
System Information
Your partitions
Create a shell file
Note: A single dash (-) is used for a single character flag
A double dash (--) is used for a word (more than a single character) flag
The Job Name
Your class account
This is the partition name that we use for classes
Double dash
bash code
Submit the job described in your shell file
Check the output
(I like sending my output to standard error, not standard output)
Auto-Notifications via Email

#SBATCH --mail-user=joeparallel@oregonstate.edu

You don’t have to do this, but if you do, please be sure you get your email address right!

The IT people are getting real tired of fielding the bounced emails when people spell their own email address wrong.

What Showed up in my Email (which I spelled correctly)

<table>

Submitting a Loop

submitloop.bash:

#!/bin/bash
#SBATCH  -J  MatrixMul
#SBATCH  -A  cs475-575
#SBATCH  -p  class
#SBATCH  --gres=gpu:1
#SBATCH  -o  matrixmul.out
#SBATCH  -e  matrixmul.err
#SBATCH  --mail-type=BEGIN,END,FAIL
#SBATCH  --mail-user=joeparallel@oregonstate.edu
for t in 1 2 4 8 16 32
  do
    /usr/local/apps/cuda/cuda-10.1/bin/nvcc -DNUMT=$t  -o matrixMul matrixMul.cu
    ./matrixMul
  done

submit-c 153% sbatch submitloop.bash
Submitted batch job 475

submit-c 154% tail –f matrixmul.err
Displays the latest output added to matrixmul.err.
Keeps doing it forever.
Control-c to get out of it.

Results for Multiplying two 1024x1024 Matrices

GigaFlops during Matrix Multiplication

(A CUDA block was actually NUMT x NUMT threads)
Use slurm’s `scancel` if your Job Needs to Be Killed

```
submit-c 163% sbatch submitloop.bash
Submitted batch job 476

submit-c 164% scancel 476
```

Submitting an OpenCL job to the DGX Systems using Slurm

```
submit.bash:

#!/bin/bash
#SBATCH -J MatrixMult
#SBATCH -A cs475-575
#SBATCH -p class
#SBATCH --gres=gpu:1
#SBATCH -o printinfo.out
#SBATCH -e printinfo.err
#SBATCH --mail-type=BEGIN,END,FAIL
#SBATCH --mail-user=joeparallel@oregonstate.edu

g++ -o printinfo printinfo.cpp /usr/local/apps/cuda/cuda-10.1/lib64/libOpenCL.so.1.1 -lm -fopenmp

./printinfo
```
Here's what `printinfo` got on one graphics card on the DGX System
