Telling the Pipeline about its Input

We will come to the Pipeline later, but for now, know that a Vulkan pipeline is essentially a very large data structure that holds (what OpenGL would call) the **state**, including how to parse its input.

C/C++:

```
struct vertex

    glm::vec3    position;
    glm::vec3    normal;
    glm::vec3    color;
    glm::vec2    texCoord;
};
```

GLSL Shader:

```
layout( location = 0 ) in vec3 aVertex;
layout( location = 1 ) in vec3 aNormal;
layout( location = 2 ) in vec3 aColor;
layout( location = 3 ) in vec2 aTexCoord;
```

```
VkVertexInputBindingDescription     vvibd[1];     // one of these per buffer data buffer
        vvibd[0].binding = 0;                     // which binding # this is
        vvibd[0].stride = sizeof( struct vertex );  // bytes between successive structs

Telling the Command Buffer what Vertices to Draw

We will come to Command Buffers later, but for now, know that you will specify the vertex buffer that you want drawn.

```
VkBuffer buffers[1] = MyVertexDataBuffer.buffer;

vkCmdBindVertexBuffers( CommandBuffers[nextImageIndex], 0, 1, vertexDataBuffers, offsets );

const uint32_t  vertexCount = sizeof( VertexData ) / sizeof( VertexData[0] );
const uint32_t  instanceCount = 1;
const uint32_t  firstVertex = 0;
const uint32_t  firstInstance = 0;

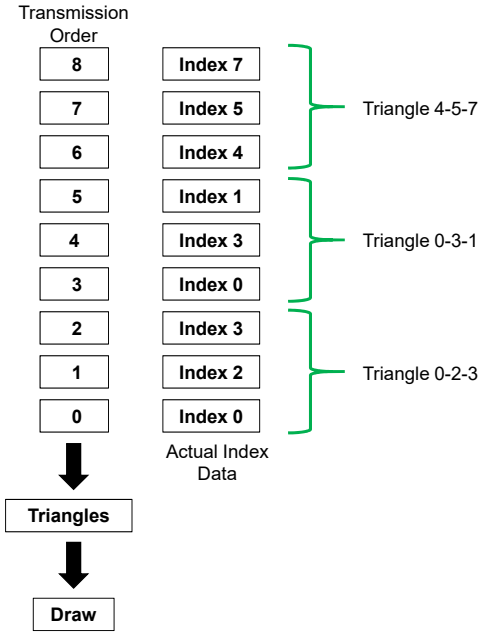
vkCmdDraw( CommandBuffers[nextImageIndex], vertexCount, instanceCount, firstVertex, firstInstance );
```

Drawing with an Indexed Buffer

```
struct vertex JustVertexData[ ] =
{
        // vertex #0:
        {
                { -1., -1., -1. },
                {  0.,  0., -1. },
                {  0.,  0.,  0. },
                {  1., 0. }
        },

        // vertex #1:
        {
                {  1., -1., -1. },
                {  0.,  0., -1. },
                {  1.,  0.,  0. },
                {  0., 0. }
        },
          . . .

int JustIndexData[ ] =
{
        0, 2, 3,
        0, 3, 1,
        4, 5, 7,
        4, 7, 6,
        1, 3, 7,
        1, 7, 5,
        0, 4, 6,
        0, 6, 2,
        2, 6, 7,
        2, 7, 3,
        0, 1, 5,
        0, 5, 4,
};
```



Drawing with an Indexed Buffer

15

vkCmdBindVertexBuffers(commandBuffer, firstBinding, bindingCount, vertexDataBuffers, vertexOffsets);

vkCmdBindIndexBuffer(commandBuffer, indexDataBuffer, indexOffset, indexType);

```
typedef enum VkIndexType
{
    VK_INDEX_TYPE_UINT16 = 0,      // 0 –          65,535
    VK_INDEX_TYPE_UINT32 = 1,      // 0 – 4,294,967,295
} VkIndexType;
```

vkCmdDrawIndexed(commandBuffer, indexCount, instanceCount, firstIndex, vertexOffset, firstInstance);

Remember that integer-indexed buffers are just BLOBs too.

Drawing with an Indexed Buffer

16

```
VkResult
Init05MyIndexDataBuffer(IN VkDeviceSize size, OUT MyBuffer * pMyBuffer)
{
	VkResult result = Init05DataBuffer(size, VK_BUFFER_USAGE_INDEX_BUFFER_BIT, pMyBuffer);
                                                    // fills pMyBuffer
	return result;
}
```

```
Init05MyVertexDataBuffer(  sizeof(JustVertexData), &MyJustVertexDataBuffer );
Fill05DataBuffer( MyJustVertexDataBuffer,              (void *) JustVertexData );

Init05MyIndexDataBuffer(  sizeof(JustIndexData), &MyJustIndexDataBuffer );
Fill05DataBuffer( MyJustIndexDataBuffer,              (void *) JustIndexData );
```

Drawing with an Indexed Buffer

17

```
VkBuffer vBuffers[1] = { MyJustVertexDataBuffer.buffer };
VkBuffer iBuffer     = { MyJustIndexDataBuffer.buffer  };

vkCmdBindVertexBuffers( CommandBuffers[nextImageIndex], 0, 1, vBuffers, offsets );
                                        // 0, 1 = firstBinding, bindingCount
vkCmdBindIndexBuffer( CommandBuffers[nextImageIndex], iBuffer, 0, VK_INDEX_TYPE_UINT32 );

const uint32_t vertexCount = sizeof(JustVertexData) / sizeof(JustVertexData[0]);
const uint32_t indexCount  = sizeof(JustIndexData)  / sizeof(JustIndexData[0]);
const uint32_t instanceCount = 1;
const uint32_t firstVertex = 0;
const uint32_t firstIndex = 0;
const uint32_t firstInstance = 0;
const uint32_t vertexOffset  = 0;

#ifdef VERTEX_BUFFER
      vkCmdDraw( CommandBuffers[nextImageIndex], vertexCount, instanceCount, firstVertex,
firstInstance );
#endif

#ifdef INDEX_BUFFER
vkCmdDrawIndexed( CommandBuffers[nextImageIndex], indexCount, instanceCount, firstIndex,
vertexOffset, firstInstance );
#endif
```

Note that there is no vertex-count! It is up to you to not exceed the number of vertices with your index numbers!

Indirect Drawing (not to be confused with Indexed)

18

```
typedef struct
VkDrawIndirectCommand
{
    uint32_t    vertexCount;
    uint32_t    instanceCount;
    uint32_t    firstVertex;
    uint32_t    firstInstance;
} VkDrawIndirectCommand;
```

vkCmdDrawIndirect(CommandBuffers[nextImageIndex], buffer, offset, drawCount, stride);

Compare this with:

vkCmdDraw(CommandBuffers[nextImageIndex], vertexCount, instanceCount, firstVertex, firstInstance);

Indexed Indirect Drawing (i.e., both Indexed and Indirect)

19

vkCmdDrawIndexedIndirect(commandBuffer, buffer, offset, drawCount, stride);

```
typedef struct
VkDrawIndexedIndirectCommand
{
    uint32_t    indexCount;
    uint32_t    instanceCount;
    uint32_t    firstIndex;
    int32_t     vertexOffset;
    uint32_t    firstInstance;
} VkDrawIndexedIndirectCommand;
```

Compare this with:

vkCmdDrawIndexed(commandBuffer, indexCount, instanceCount, firstIndex, vertexOffset, firstInstance);

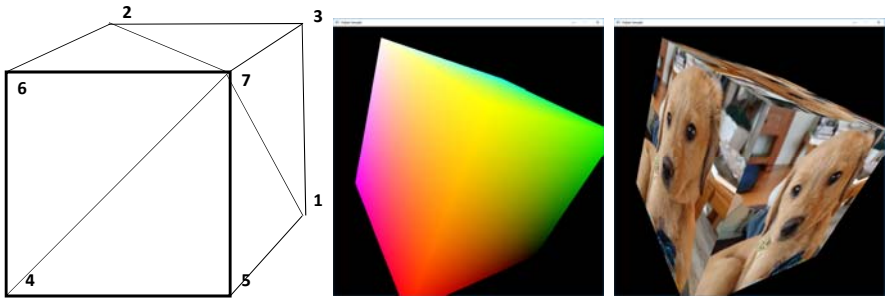
Sometimes the Same Point Needs Multiple Attributes

20



Sometimes a point that is common to multiple faces has the same attributes, no matter what face it is in. Sometimes it doesn't.

A color-interpolated cube like this actually has both. Point #7 above has the same color, regardless of what face it is in. However, Point #7 has 3 different normal vectors, depending on which face you are defining. Same with its texture coordinates.

Thus, when using index-ed buffer drawing, you need to create a new vertex struct if *any* of {position, normal, color, texCoords} changes from what was previously-stored at those coordinates.
