Telling the Pipeline about its Input

We will come to the Pipeline later, but for now, know that a Vulkan pipeline is essentially a very large data structure that holds (what OpenGL would call) the **state**, including how to parse its input.

C/C++:

```
struct vertex
{
        glm::vec3       position;
        glm::vec3       normal;
        glm::vec3       color;
        glm::vec2       texCoord;
};
```

GLSL Shader:

```
layout( location = 0 ) in vec3 aVertex;
layout( location = 1 ) in vec3 aNormal;
layout( location = 2 ) in vec3 aColor;
layout( location = 3 ) in vec2 aTexCoord;
```

```
VkVertexInputBindingDescription            vvibd[1];     // one of these per buffer data buffer
        vvibd[0].binding = 0;                            // which binding # this is
        vvibd[0].stride = sizeof( struct vertex );       // bytes between successive structs
        vvibd[0].inputRate = VK_VERTEX_INPUT_RATE_VERTEX;
```

```

```

const uint32_t  firstVertex = 0;
const uint32_t  firstInstance = 0;

vkCmdDraw( CommandBuffers[nextImageIndex], vertexCount, instanceCount, firstVertex, firstInstance );

Indirect Drawing (not to be confused with Indexed)

18

```
typedef struct

	uint32_t    firstInstance;
} VkDrawIndirectCommand;
```

```
vkCmdDrawIndirect( CommandBuffers[nextImageIndex], buffer, offset, drawCount, stride);
```

Compare this with:

```
vkCmdDraw( CommandBuffers[nextImageIndex], vertexCount, instanceCount, firstVertex, firstInstance );
```

mjb – September 17, 2018

Indexed Indirect Drawing (i.e., both Indexed and Indirect)

```
vkCmdDrawIndexedIndirect( commandBuffer, buffer, offset, drawCount, stride );
```

```
typedef struct

{
    uint32_t   indexCount;
    uint32_t   instanceCount;
    uint32_t   firstIndex;
    int32_t    vertexOffset;
    uint32_t   firstInstance;
} VkDrawIndexedIndirectCommand;

Compare this with:

```

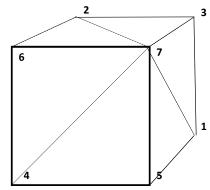
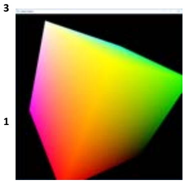
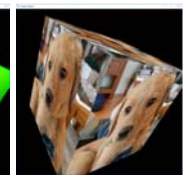
Sometimes the Same Point Needs Multiple Attributes







Sometimes a point that is common to multiple faces has the same attributes, no matter what face it is in. Sometimes it doesn't.

A color-interpolated cube like this actually has both. Point #7 above has the same color, regardless of what face it is in. However, Point #7 has 3 different normal vectors, depending on which face you are defining. Same with its texture coordinates.

Thus, when using index-ed buffer drawing, you need to create a new vertex struct if *any* of {position, normal, color, texCoords} changes from what was previously-stored at those coordinates.
