**Mission:** Find any sign of life on Earth.

People represent same data using different schemas.

We want to learn same accurate answers over all possible schemas for the same information.

```
life(x) :- boxes(y,x,z,wet).
```

```
life(x) :- contains(y,x), color(y,green).
```

```
life(x) :- contains(y,x), color(y,green), description(y, wet).
```

**Castor:** schema independent, accurate and efficient. It leverages concepts of schema design.
