

Some Exception Handling

```
public void doBet() {  
    int bet;  
    try {  
        bet = Integer.parseInt( playerBet.getText() );  
        if ( bet == 0 )  
            throw new IllegalArgumentException("Zero Bet");  
        if ( bet < 0 )  
            throw new IllegalArgumentException("Negative Bet");  
        if ( bet > owner.getPlayerBalance() )  
            throw new Exception("Player over bet");  
        if ( bet > owner.getProgramBalance() )  
            throw new Exception("Program can't cover bet");  
    }  
    catch ( NumberFormatException nfe ){  
        owner.post("BET: " + nfe );  
        bet = 0;  
    }  
    catch ( Exception e ) {  
        owner.post("BET: " + e );  
        bet = 0;  
    }  
    owner.setBet( bet );  
    updateFields();  
}
```

Since Exception is the parent,
IllegalArgumentException is
also caught here
