CS461 Requirements Document Evaluation

Project _____

Presentation:

Clarity: were the prepared materials adequate to communicate the requirements to the review audience?

Questions handling: were questions answered satisfactorily?

Requirements draft documentation:

Cover Page (title, project, team members, date)?

Objective: - clearly state the desired capability or functionality in one paragraph

Roles: are all roles identified and described?

Use cases: are a reasonable number of representative use cases described?
In sufficient detail to do risk assessment, permit planning and design? For requirements theses should focus on external interactions with users and other systems.

Requirements: are both functional and non-functional requirements listed?

Functional: These should focus on *what* users (external agents) in various roles can do with the system, not *how* it does it.

Non-functional: Are a representative set of non-functional requirements included:
Implementation: systems/languages/softwate-packages, etc
Users: how user friendly must system be? (how sophisticated are users)
Development/test environment contraints (location or time available?)
Special documentation/delivery/training constraints?

Team participation:

Did all team members participate?
