LookingGlassQuilt.pptx

Here is How to Generate a Quilt from OpenGL

Here are some pre-defined constants you will need:

```

const int QUILTWIDTH = 3360;
const int QUILTHEIGHT = 3360;
const int QUILTNUMWIDTH = 8;
const int QUILTNUMHEIGHT = 8;
const int QUILTTOTALBLOCKS = QUILTNUMWIDTH * QUILTNUMHEIGHT; // 420
const int BLOCKWIDTH = QUILTWIDTH / QUILTNUMWIDTH; // 560
const int BLOCKHEIGHT = QUILTHEIGHT / QUILTNUMHEIGHT; // 560
const float QUILTDEP = 5.f;
const float QUILTFOVFAR = 0.10f;
const float QUILTASPECT_Y_OVER_X = (float)BLOCKHEIGHT / (float)BLOCKWIDTH; // 4:3 = 1.3333
const char * QUILTFILENAME = "Quilt_gs8x60.75.bmp"; // must be in the format "_gs8x60.75.*"
unsigned char QuiltArray[QUILTHEIGHT][QUILTWIDTH][3]; // holds the entire quilt
unsigned char BlockArray[BLOCKHEIGHT][BLOCKWIDTH][3]; // holds one block
    
```

glp - September 18, 2013

Triggering the File Output

```

void Keyboard( unsigned char c, int x, int y )
{
    switch( c )
    {
        case 'w':
        case 'W':
            CreateAndWriteQuilt();
            break;
        . . .
        case 'q':
        case 'Q':
        case ESCAPE:
            DoMainMenu( QUIT ); // will not return here
            break; // happy compiler
        default:
            sprintf( stderr, "Don't know what to do with keyboard hit: '%c' (%x%x)\n", c, c );
    }
    // Force a call to Display();
    glutSetWindow( MainWindow );
    glutPostRedisplay();
}
    
```

Hit the 'w' key to trigger the 48 renderings and file-writing

glp - September 18, 2013

Generating the 48 Individual Images for the Quilt, I

```

void CreateAndWriteQuilt()
{
    glutSetWindow( MainWindow );
    float eyex = - QUILTDEP*sqrt((float)QUILTTOTALBLOCKS)/2.f;
    for( int y = 0; y < QUILTNUMHEIGHT; y++ )
    {
        for( int x = 0; x < QUILTNUMWIDTH; x++ )
        {
            glDrawBuffer( GL_FRONT );
            glEnable( GL_DEPTH_TEST );
            glShadeModel( GL_FLAT );
            int vx = glutGet( GLUT_WINDOW_WIDTH );
            int vy = glutGet( GLUT_WINDOW_HEIGHT );
            int xl = (vx - BLOCKWIDTH) / 2;
            int yb = (vy - BLOCKHEIGHT) / 2;
            glViewport( xl, yb, BLOCKWIDTH, BLOCKHEIGHT );
            glClear( GL_COLOR_BUFFER_BIT | GL_DEPTH_BUFFER_BIT );
            glMatrixMode( GL_PROJECTION );
            glLoadIdentity();
            Ortho( 0.f, 0.f, 8.f, 0.f, 0.f, 0.f, 0.f, 0.f );
            glMatrixMode( GL_MODELVIEW );
            glLoadIdentity();
            glLookAt( 0.f, 0.f, 8.f, 0.f, 0.f, 0.f, 0.f, 1.f, 0.f );
            DisplayScene();
            glFlush();
            glFinish();
        }
    }
}
    
```

glp - September 18, 2013

Generating the 48 Individual Images for the Quilt, II

```

. . .
// done rendering -- upload the pixels:
glReadBuffer( GL_FRONT );
glPixelStorei( GL_PACK_ALIGNMENT, 1 );
glReadPixels( xl, yb, BLOCKWIDTH, BLOCKHEIGHT, GL_RGB, GL_UNSIGNED_BYTE, BlockArray );
// location for this block in the large QuiltArray:
for( int yb = 0; yb < QUILTNUMHEIGHT; yb++ )
{
    for( int xb = 0; xb < QUILTNUMWIDTH; xb++ )
    {
        QuiltArray[yb*QUILTNUMHEIGHT+xb][x*BLOCKWIDTH+xb][0] = BlockArray[yb][xb][0];
        QuiltArray[yb*QUILTNUMHEIGHT+xb][x*BLOCKWIDTH+xb][1] = BlockArray[yb][xb][1];
        QuiltArray[yb*QUILTNUMHEIGHT+xb][x*BLOCKWIDTH+xb][2] = BlockArray[yb][xb][2];
    }
}
Sleep( 250 );
eyex += QUILTDEP*FAVE;
} // y
} // x
WriteArray( QUILTFILENAME );
}
    
```

glp - September 18, 2013

DisplayScene() - just do the scene drawing, I

```

void DisplayScene()
{
    // rotate the scene:
    glRotatef( (GLfloat)root, 0.f, 1.f, 0.f );
    glRotatef( (GLfloat)root, 1.f, 0.f, 0.f );
    // uniformly scale the scene:
    if( Scale < MINSCALE )
        Scale = MINSCALE;
    glScalef( (GLfloat)Scale, (GLfloat)Scale, (GLfloat)Scale );
    // possibly draw the axes:
    if( AxesOn != 0 )
    {
        glColor3fv( Colors[WhichColor][0] );
        glCallList( AxesList );
    }
    // since we are using glScalef(), be sure the normals get untitled:
    glEnable( GL_NORMALIZE );
    . . .
}
    
```

glp - September 18, 2013

DisplayScene() – just do the scene drawing, II

```

- - -
glShadeModel(GL_FLAT);
if (SmoothOn)
{
    glShadeModel(GL_SMOOTH);
}

glDisable(GL_LIGHTING);
glTexEnvf(GL_TEXTURE_ENV, GL_TEXTURE_ENV_MODE, GL_REPLACE);
if (!LightingOn)
{
    glEnable(GL_LIGHTING);
    glEnable(GL_LIGHT0);
    glTexEnvf(GL_TEXTURE_ENV, GL_TEXTURE_ENV_MODE, GL_MODULATE);
}

glBindTexture(GL_TEXTURE_2D, Tex);
glDisable(GL_TEXTURE_2D);
if (TextureOn)
{
    glEnable(GL_TEXTURE_2D);
}
- - -

```

Oregon State University Computer Graphics

DisplayScene() – just do the scene drawing, III

```

- - -
// draw the objects by calling up their display lists:
glTranslatef(0.f, -2.25f, 0.);
glColor3f(0.8f, 0.2f, 0.2f);
SetMaterial(0.8f, 0.2f, 0.2f, 10.f);
glCallList(Sphere01);

glTranslatef(0.f, 1.75f, 0.);
glColor3f(0.8f, 0.8f, 0.2f);
SetMaterial(0.8f, 0.8f, 0.2f, 8.f);
glCallList(Cone01);

glTranslatef(0.f, 2.5f, 0.);
glColor3f(0.2f, 0.8f, 0.2f);
SetMaterial(0.2f, 0.8f, 0.2f, 6.f);
glCallList(Torus01);

glDisable(GL_LIGHTING);
glDisable(GL_TEXTURE_2D);
glShadeModel(GL_FLAT);
}

```

Oregon State University Computer Graphics

Doing the Off-Axis Projection

```

void Frustumf(float left, float right, float bottom, float top, float znear, float zfar, float sproj)
{
    if( sproj != 0.0 )
    {
        left  *= ( snear/sproj );
        right *= ( snear/sproj );
        bottom *= ( snear/sproj );
        top    *= ( snear/sproj );
    }

    glFrustum( left, right, bottom, top, znear, zfar );
}

void OffAxisPersp(float fovdeg, float aspect_y_over_x, float znear, float zfar, float s0p, float eyex)
{
    float tanfovx = tanf( (float)(M_PI/180.) * fovdeg / 2.f );
    float right = s0p * tanfovx;
    float left  = -right;

    float bottom = aspect_y_over_x * left;
    float top    = aspect_y_over_x * right;

    left  -= eyex;
    right -= eyex;

    Frustumf( left, right, bottom, top, znear, zfar, s0p );
    glTranslatef(-eyex, 0.0, 0.0 );
}

```

Oregon State University Computer Graphics

How the usual Display() function calls DisplayScene()

```

void Display()
{
    glutSetWindow(MainWindow);
    glClear(GL_COLOR_BUFFER_BIT | GL_DEPTH_BUFFER_BIT);
    glDisable(GL_DEPTH_TEST);
    glShadeModel(GL_FLAT);

    // set the viewport to a square centered in the window:
    Glint vx = glutGet(GLUT_WINDOW_WIDTH);
    Glint vy = glutGet(GLUT_WINDOW_HEIGHT);
    Glint w = vx < vy ? vx : vy; // minimum dimension
    Glint xl = ( vx - w ) / 2;
    Glint yl = ( vy - w ) / 2;
    glViewport(xl, yl, w, w);

    // set the viewing volume:
    glMatrixMode(GL_PROJECTION);
    glLoadIdentity();
    if (WhichProjection == ORTHO)
        glOrtho(-2.f, 2.f, -2.f, 2.f, 0.1f, 1000.f);
    else
        gluPerspective(70.f, 1.f, 0.1f, 1000.f);

    // place the objects into the scene:
    glMatrixMode(GL_MODELVIEW);
    glLoadIdentity();
    glLookAt(0.f, 0.f, 7.f, 0.f, 0.f, 0.f, 0.f, 1.f, 0.f);

    // draw just the scene:
    DisplayScene();

    glutSwapBuffers();
    glutPostEvents();
}

```

Oregon State University Computer Graphics

Here is How to Generate a Quilt from Blender

You can also generate these quilts automatically from Blender.

The first thing you need to do is retrieve a Blender Add-on. The Add-on's name is **AliceLG.zip** and it can be found at <https://github.com/regcs/AliceLG/releases>

Click here and save this file anywhere. Do not un-zip it!

Oregon State University Computer Graphics

Getting the AliceLG.zip Blender Add-on, I

Run Blender.

Click on **Edit** → **Preferences** → **Add-ons**.

13

Getting the AliceLG.zip Blender Add-on, II

Click on **Install**.

Then navigate to where you installed **AliceLG.zip** and select it.

Don't un-zip it!

14

Getting the AliceLG.zip Blender Add-on, III

Scroll down the list of Add-ons until you see **View: Alice/LG**

Click the **checkbox** to enable it. Then click the **arrow** and scroll down so you can see all the information.

15

Getting the AliceLG.zip Blender Add-on, IV

Scroll down so you can see all the information.

Then click on **Install Dependencies**. This might take a while. Be patient.

16

Getting the AliceLG.zip Blender Add-on, V

When it's done, you will see this:

Now exit Blender and start it up again.

17

Finding the Looking Glass Tab in Blender

Hit the **'n'** key and you will see the usual **Transform** panel, but something new has been added.

Click on the **Looking Glass** tab.

18

Using the Looking Glass Tab, I 19

Click here and select **Camera**

This will bring up a viewing volume, like this:

Looking Glass
No Looking Glass...
Portrait, 48 Views
Camera Setup
Clip Start 4 m
Clip End 6 m
Focal Plane 5 m
Quit Setup & Rendering
Use Device Settings
Add Metadata
Device: Looking Glass P...
Quit: Portrait, 48 Views
Output: Only Quit File
Render Quit
Render Animation Quit

Using the Looking Glass Tab, II 20

Now adjust the **Clip Start** and **Clip End** to completely surround your scene.

Then adjust the **Focal Plane** to be roughly down the middle of the scene, like this:

Looking Glass
No Looking Glass...
Portrait, 48 Views
Camera Setup
Clip Start 9 m
Clip End 12 m
Focal Plane 11 m
Quit Setup & Rendering
Use Device Settings
Add Metadata
Device: Looking Glass P...
Quit: Portrait, 48 Views
Output: Only Quit File
Render Quit
Render Animation Quit

Select Portrait, 48 Views

Using the Looking Glass Tab, III 21

Go select the **Output** icon and navigate down to **Output**.

Output
C:\tmp\Monkey
Saving File Extensions
Cache Result
File Format PNG
Color RGB
Color Depth 16
Compression 15%
Image Sequence Overwrite
Placeholders

Click here and navigate to some folder for Blender to render your quilt into. Click Accept and then give a filename. On my system, it ended up looking like this.

Using the Looking Glass Tab, IV 22

Going back to the Looking Glass tab, click on **Render Quit**. This will trigger the rendering of 48 different scenes.

You can watch its progress at the bottom of the screen:

Looking Glass
No Looking Glass...
Portrait, 48 Views
Camera Setup
Clip Start 4 m
Clip End 6 m
Focal Plane 5 m
Quit Setup & Rendering
Use Device Settings
Add Metadata
Device: Looking Glass P...
Quit: Portrait, 48 Views
Output: Only Quit File
Render Quit
Render Animation Quit

Rendering view 3/48 | Render | 0%
