### Forward Kinematics: You Start with Separate Pieces, all Defined in their Own Local Coordinate System

2

### Forward Kinematics: Hook the Pieces Together, Change Parameters, Things Move (All Children Understand This)

3

### Forward Kinematics: Where do the Pieces Move To?

Locations?

Ground

4

### Positioning Part #1 With Respect to Ground

1. Rotate by  $\theta_1$
2. Translate by  $T_{1/G}$

Write it  $\rightarrow$

$$[M_{1/G}] = [T_{1/G}] * [R_{\theta_1}]$$

$\leftarrow$  Say it

5

### Why Do We Say it Right-to-Left?

Write it  $\rightarrow$

$$[M_{1/G}] = [T_{1/G}] * [R_{\theta_1}]$$

Say it  $\leftarrow$

It's because computer graphics has adopted the convention that the coordinates are multiplied on the right side of the matrix.

$$\begin{bmatrix} x' \\ y' \\ z' \\ 1 \end{bmatrix} = \begin{bmatrix} A & B & C & D \\ E & F & G & H \\ I & J & K & L \\ 0 & 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} x \\ y \\ z \\ 1 \end{bmatrix}$$

So the right-most transformation in the sequence multiplies the (x,y,z,1) first and the left-most transformation multiplies it last

6

### Positioning Part #2 With Respect to Ground

1. Rotate by  $\theta_2$
2. Translate the length of part 1
3. Rotate by  $\theta_1$
4. Translate by  $T_{1/G}$

Write it

$$[M_{2/G}] = [T_{1/G}] * [R_{\theta_1}] * [T_{2/1}] * [R_{\theta_2}]$$

Say it

$$[M_{2/G}] = [M_{1/G}] * [M_{2/1}]$$

### Positioning Part #3 With Respect to Ground

1. Rotate by  $\theta_3$
2. Translate the length of part 2
3. Rotate by  $\theta_2$
4. Translate the length of part 1
5. Rotate by  $\theta_1$
6. Translate by  $T_{1/G}$

Write it

$$[M_{3/G}] = [T_{1/G}] * [R_{\theta_1}] * [T_{2/1}] * [R_{\theta_2}] * [T_{3/2}] * [R_{\theta_3}]$$

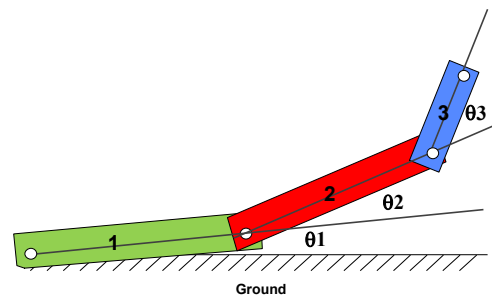

Say it

$$[M_{3/G}] = [M_{1/G}] * [M_{2/1}] * [M_{3/2}]$$
