What is Kaltura?

Kaltura is a web-based screen-recording application. OSU owns a site license to it, which means that all students and staff can use it at no cost to themselves. We will use it so that you can show off your great project without you and us having to be sitting together.

You don't need to use this video as a way to explain your report. I will read the report to get that information. Likewise, don't use the video to walk me through the code. Use this video as a way to show what it looks like when it runs. If I want to see your code, I will go look at it separately. Show off all the required features. Show off anything you have done that is extra and cool. Cool is always good!

If you have a microphone, use it! It is easier for us to figure out what your features do if you are telling us.

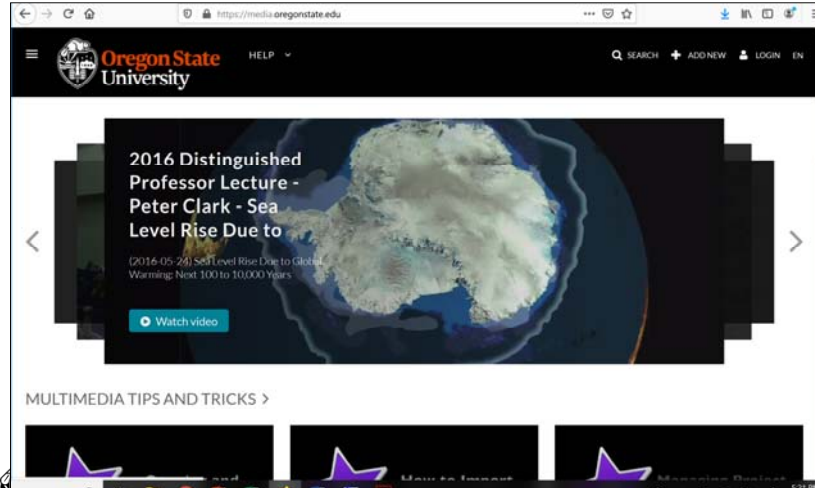

To finish grading each project, we will need to watch a lot of videos. Have mercy on us and keep your video short and to the point. Show us all your different program features, but once you have demonstrated a feature, move on to the next one. Do the math – *M* minutes per video times *P* people in the class, gives ...

6
Ask to add a new recording using the Recording Tools

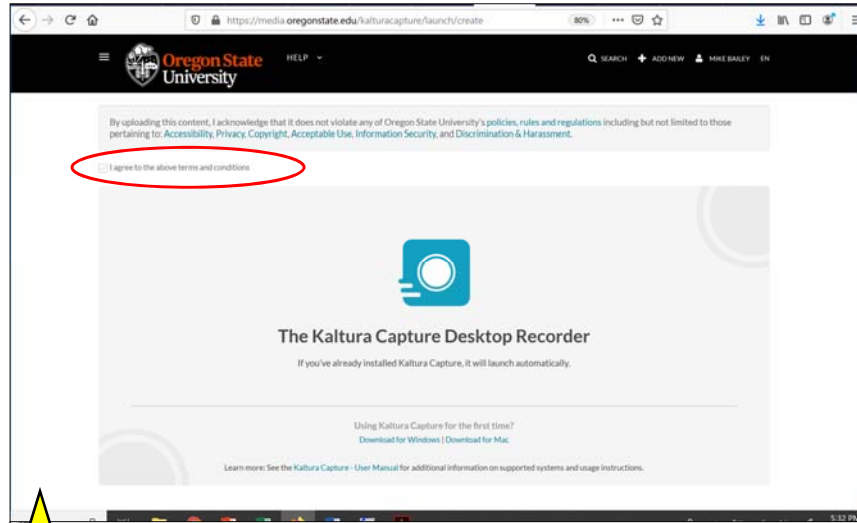

If you've never done this before, a plug-in will need to be installed first. The slides marked with the yellow star show this process. If you have done this before, you can skip around the yellow-star slides.

Download the proper version

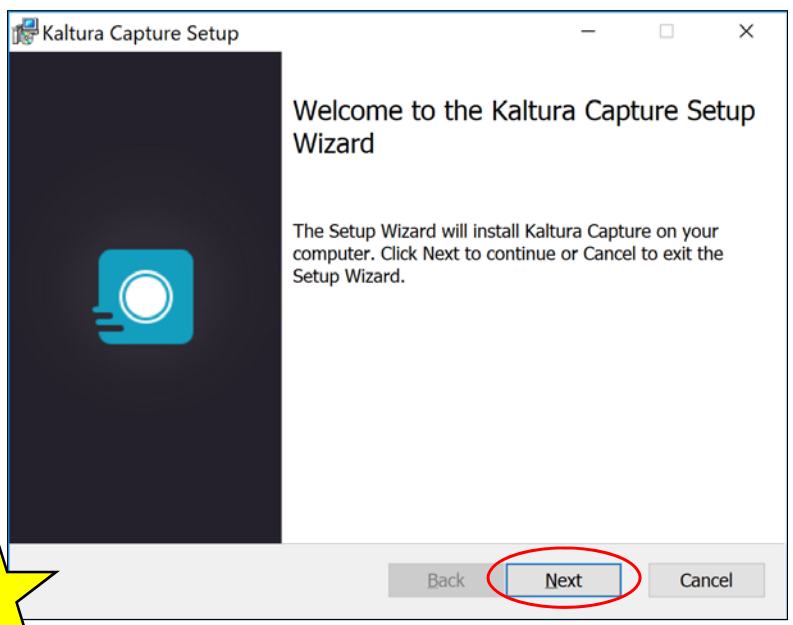

8

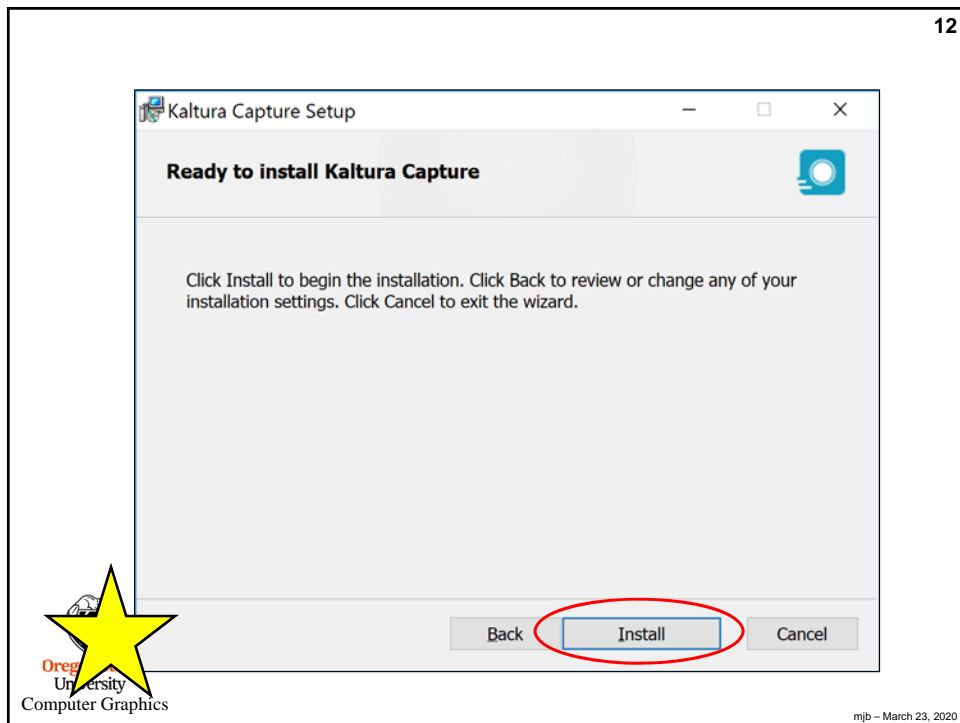

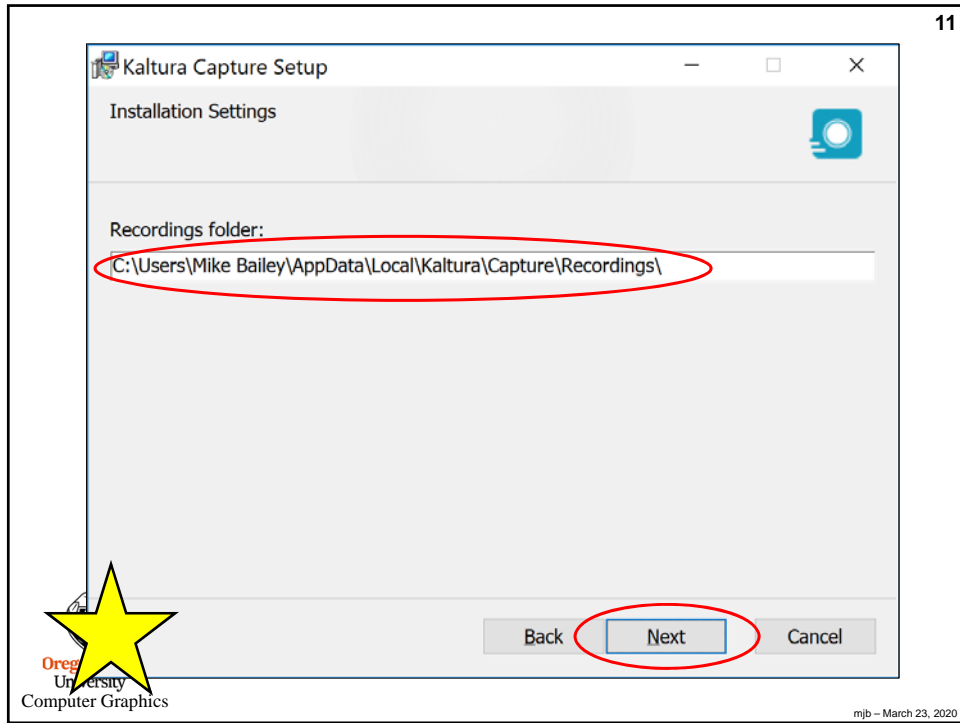

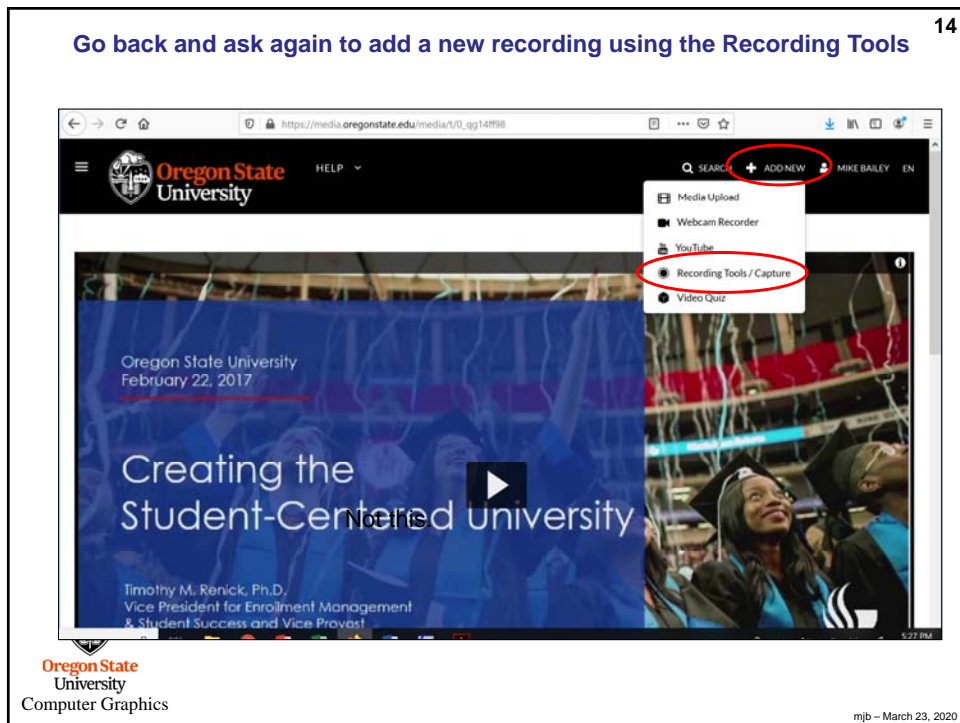

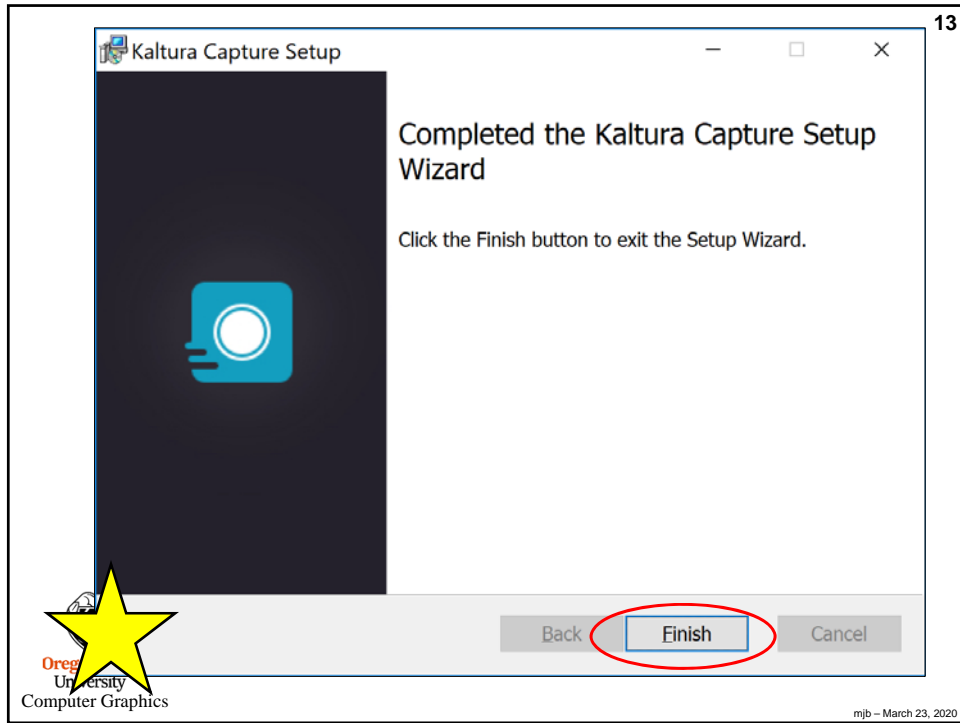

mjb - March 23, 2020

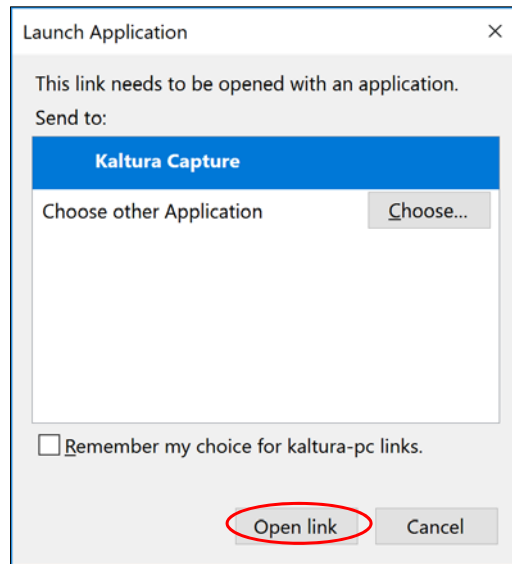

I like to just save it on the Desktop so I can easily find it later

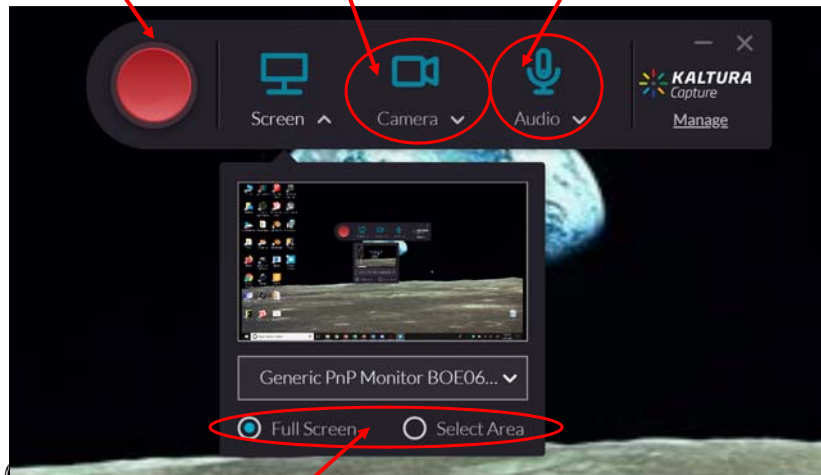

Do you want to record your face?

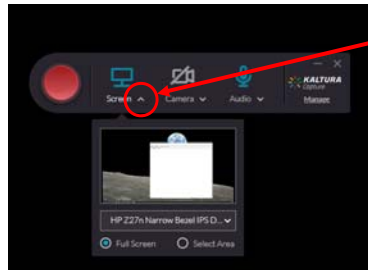

Start recording!

How do you want to record your voice?

Do you want to record the whole screen or just a subset of it?

If you want the preview screen to show, click this arrow up

If you don't want the preview screen to show, click the arrow down

If you want to record both the screen and your face, make sure the camera icon is showing like this

If you don't want your face recorded, click the camera icon to make it look like this

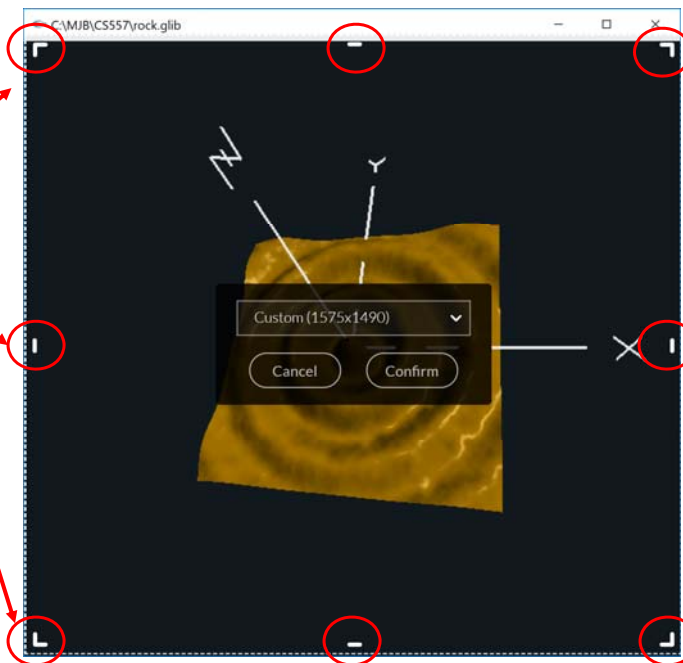

To see your audio source options, click this arrow

Pick the source you want, then click on the arrow again

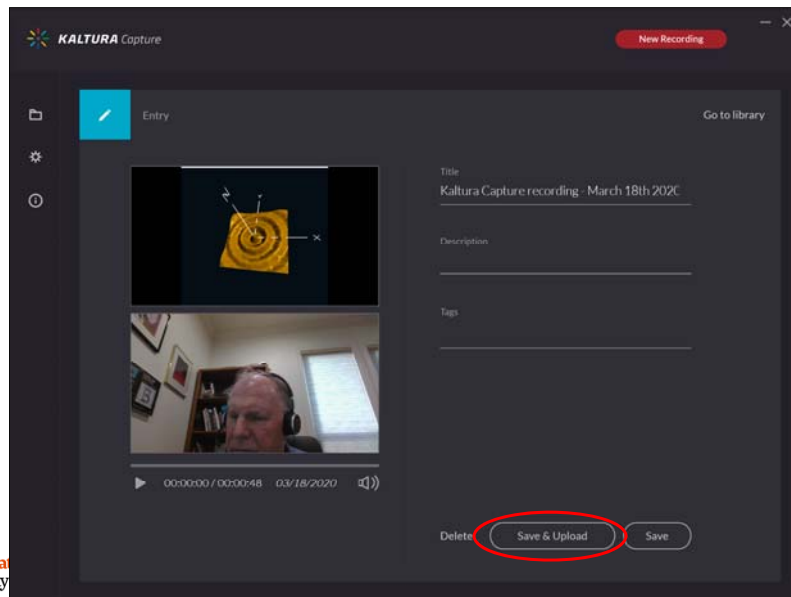

Move these around to outline the part of the screen you want to capture

How much time you have recorded so far

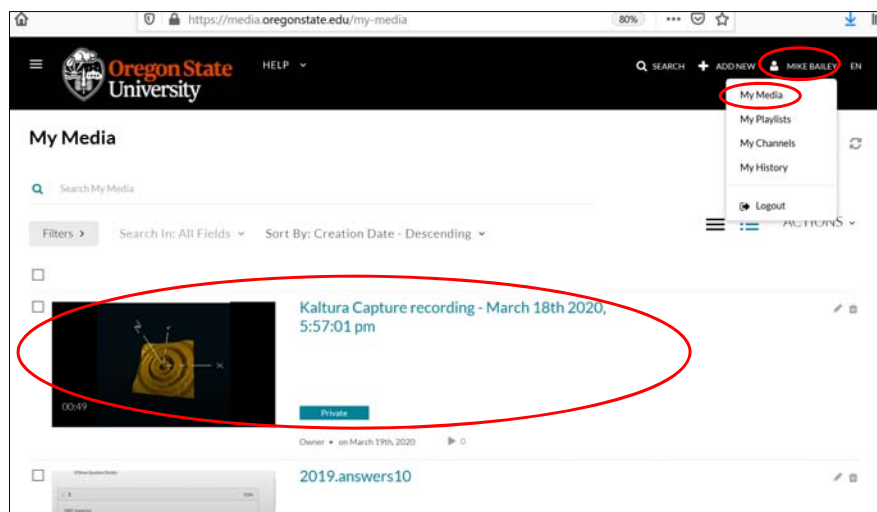

Save the recording and upload it to Media Space

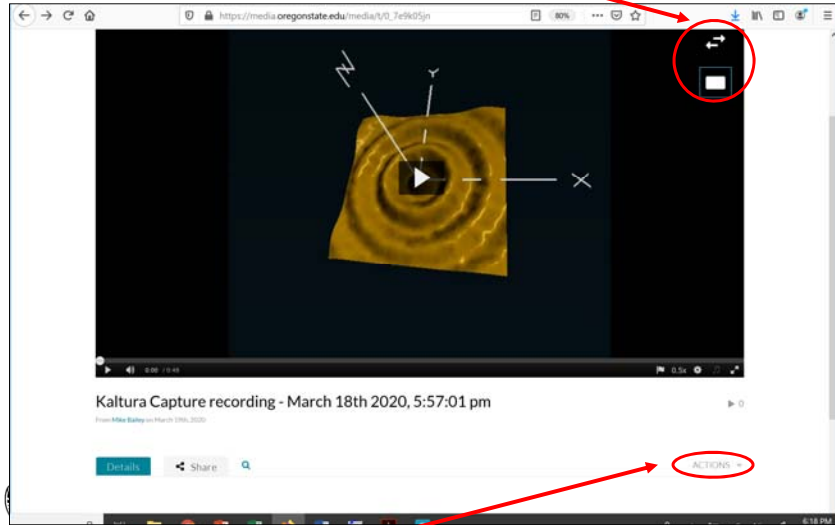

Kaltura shows you your uploading progress

Go back to the Media home page and see your new recording in My Media

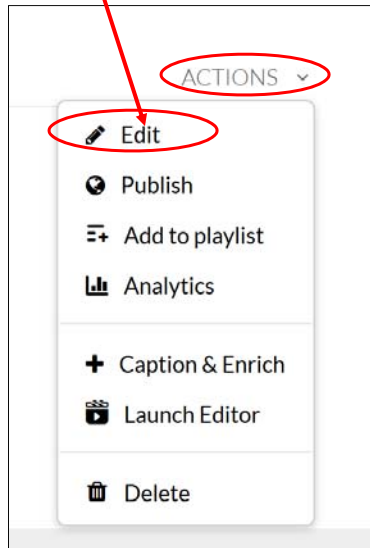

Manipulate these two controls to decide how much of the screen to show versus how much of your face

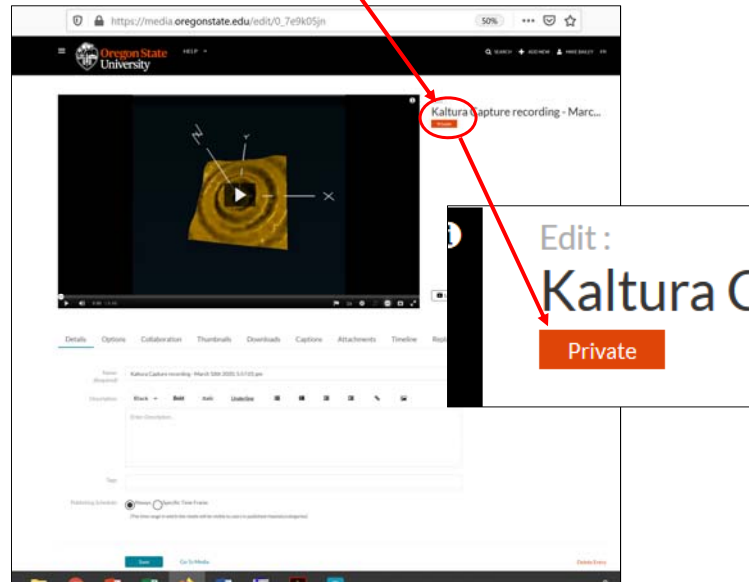

This is the *Actions* pull-down menu. It is really dim.

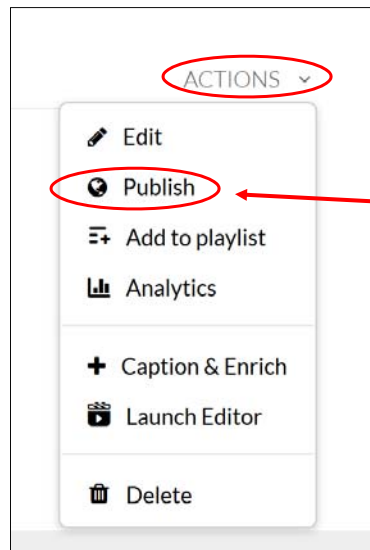

The *Actions* menu will let you see and edit the parameters of your video

Uh-oh. This recording's status is *Private*. That means that nobody will be able to look at it except you.

The *Actions* menu to the rescue again!

Use this to set your recording status to *Unlisted*!

Unlisted means that anyone who knows the URL of your video, which you will give them, can look at it.

The screenshot shows a settings panel with tabs for 'Details' and 'Share'. A blue banner at the top states: "You can publish the media to multiple categories and channels." Below this, three radio button options are listed:

- Private - Media page will be visible to the content owner only.
- Unlisted - Media page will be visible to anyone with a link to the page.
- Published - Media page will be visible to individuals according to entitlements on published destinations.

 At the bottom of the panel, there are two buttons: 'Save' and 'Cancel'. Red circles highlight the 'Unlisted' option and the 'Save' button. A red arrow points from the text above to the 'Unlisted' option, and another red arrow points from the 'Save' button to the text below.

Be sure to Save! Not doing that will forget that you changed to Unlisted.

Sharing your video with others

You can link and embed your video in your own web pages.

Click on your video to play it.

Underneath the video, there's a *Share* button.

Clicking this button gives you options for:

"Link to Media Page", "Embed", "oEmbed", and "Email".

The screenshot shows the 'Share' button highlighted with a red circle. Below it, a menu is open with four options: 'Link to Media Page', 'Embed', 'oEmbed', and 'Email'. The 'Link to Media Page' option is selected, and its corresponding URL is displayed in a text box: https://media.oregonstate.edu/media/t/0_7e9k05jn. Below the URL, there is a 'Start & End Time' section with a 'Start at' checkbox and a time input field set to '00:00:00'. Red circles highlight the 'Share' button, the menu options, and the URL. A red arrow points from the text above to the 'Share' button, and another red arrow points from the URL to the text below.

Copy and paste this text into your HTML or Word document

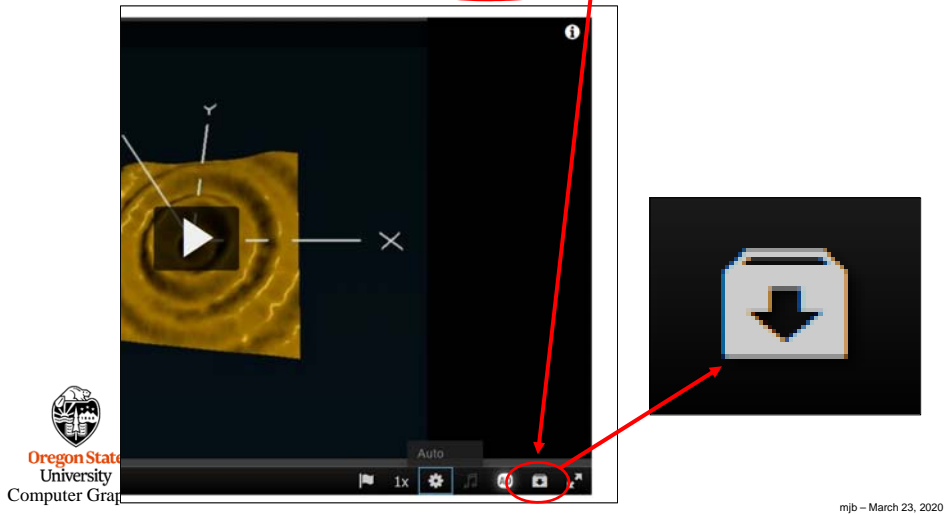

After you leave OSU, your material stays right here on OSU's Media Space server. Apparently we don't have any retention rules for now. However, that could always change, so you should be sure to save a copy of your best videos somewhere else.

Downloading your video as an MP4 file

31

This is helpful if you want to let people download it and play it locally.

Select *Actions*, then *Edit*, then the *Download* button

Downloading your video as an MP4

32

Pressing the Download button will bring up a dialog box which will let you save the video as an MP4 file.
