CUDA Summary

- CPU and GPU programs exist in the same file
 - Can share #defines
 - Can share information on the GPU function calling sequence
- Nvidia-only
- Much utility code provided (linear algebra, machine learning, etc.)
- Well-respected in the research community
- Need special compiler options

Linux

Windows

OpenCL Summary

3

- CPU and GPU programs exist in separate files
 - Must be sure to set #defines the same
 - You must provide information on the GPU function calling sequence
- Runs on Nvidia GPUs, AMD CPUs/GPUs, Intel CPUs/GPUs, FPGAs, ...
- Little utility code provided
- Code looks a lot like GLSL compute shader code
- Well-respected in the production community
- Need no special compiler options (GPU code compiled in the driver)

3

What's Common?

4

- CPU and GPU programs exist in the same file
 - Can share #defines
 - Can share information on the GPU function calling sequence
- Nvidia-only
- Much utility code provided (linear algebra, machine learning, etc.)
- Well-respected in the research community
- Need special compiler options

- CPU and GPU programs exist in separate files
 - Must be sure to set #defines the same
 - You must provide information on the GPU function calling sequence
- Runs on Nvidia GPUs, AMD CPUs/GPUs, Intel CPUs/GPUs, FPGAs, ...
- Little utility code provided
- Code looks a lot like GLSL compute shader code
- Well-respected in the production community
- Need no special compiler options (GPU code compiled in the driver)

- Allocate data space in GPU memory
- Transfer data from CPU to GPU
- Execute a kernel to compute on that data
- Transfer data back from the GPU to the CPU
