# CS325 - Analysis of Algorithms (4 credits): Instructor: Amir Nayyeri \*

Spring 2014

March 28, 2014

OSU catalog course description, including pre-requisites/co-requisites:

Recurrence relations, combinatorics, recursive algorithms, proofs of correctness.

**PREREQS:** CS 261 and (MTH 232 or CS225)

### Course content:

- 1. In the first half of this course we will study:
  - (a) analyzing algorithms for correctness and running time,
  - (b) divide and conquer and use recurrence relations to analyze recursive algorithms,
  - (c) project 1 will involve implementing and analyzing iterative and recursive algorithms,
  - (d) the first exam will cover this earlier material
- 2. In the second half the course we will be approaching much more difficult problems, we will study:
  - (a) dynamic programming,
  - (b) linear programming,
  - (c) project 2 and project 3 looking at these methods in more depth,
  - (d) then we will characterize the difficulty of problems by way of NP completeness.
  - (e) throughout the second half of the course, we will develop heuristics for solving the traveling salesperson problem,
  - (f) the second exam will mostly cover this later material.

# Blackboard:

This course will be largely delivered via Blackboard, where you will interact with the course content. Within the course Blackboard site you will access the learning materials, tutorials, syllabus, and calendar as well as backup your projects. To preview how an online course works, visit the Ecampus Course Demo. For technical assistance, Blackboard and otherwise, see <a href="http://ecampus.oregonstate.edu/services/technical-help.htm">http://ecampus.oregonstate.edu/services/technical-help.htm</a>.

<sup>\*</sup>nayyeria@eecs.oregonstate.edu, email should not be the first line of contact, you should use IRC, discussion boards, and office hours first.

# Measurable student learning outcomes:

At the completion of the course, students will be able to:

- 1. Use  $O, \Omega, \Theta$  and simple recurrences to analyze the time complexity of iterative and recursive algorithms.
- 2. Prove the correctness of algorithms.
- 3. Implement recursive, iterative, and heuristic algorithms.
- 4. Prove that a problem is NP-complete using reductions.

# Learning resources:

All learning materials will be made freely available on the course website, including:

- 1. A central book that covers algorithm analysis, http://www.cs.berkeley.edu/~vazirani/algorithms/,
- 2. Proof practice such as http://www.cs.uiuc.edu/~jeffe/teaching/algorithms/notes/98-induction.pdf,
- 3. Additional view points from various open education such as http://ocw.mit.edu/index.htm

# **Grading:**

Scores for coursework items will be posted on Blackboard as they are graded. Feedback will be provided when available. You will turn in all coursework items through **both** blackboard and TEACH **before** 23:59 (**TEACH server time, Pacific Time Zone**) on the date they are due (generally Sunday in my courses), be sure you give yourself an hour or more to submit coursework.

To receive a passing grade in this course you must demonstrate at least basic proficiency in each of the following course work item grading categories:

# Participation: Primarily Discussion - 20%

- Discussion about course topics help solidify understanding and practice with related vocabulary,
- There may be quizzes to help guide you in discovering what topics you might need to practice more,

# Demonstration: Projects - 30%

- There are a number of different project-based components to be completed over the course of this class,
- Projects are expected to be completed with the help of a group of 2-3 individuals,
- A project is generally scored on the following categories:
  - understanding,
  - design,
  - implementation,
  - testing,
  - reflection,

- Projects are graded on how well they demonstrate understanding of the problem, approach and solve the problem, how well they show that you have tested all possible states of a problem, meet specification, and follow an easy to read, academically acceptable, and consistent style in any code that is submitted,
- Programs submitted must compile and run on our servers or they will not be graded, (to help ensure that you have a working program at the end of your assignment, be sure to start with a simple program that you can get to work, then add to it, expanding its capabilities, so that if at some point it stops compiling you might know where an error was introduced)
- Be sure to submit all relevant files (all reports, source files, and files used in IO) for each project with each submission, (this includes files provided to you, a program should be able to compile and run from just the files you submit)

### Examination: Exams - 50\%

- There are 2 exams for this course,
- These exams are designed to take about 90 minutes each, but you will have 110 minutes to complete them,
- These exams are designed to challenge even good students and may be curved to reflect the difficulty,
- Exams will be proctored, so you should schedule your exams a week or two in advance. There is generally a small fee associated with exam proctoring. For more information please visit: <a href="http://ecampus.oregonstate.edu/services/proctoring/">http://ecampus.oregonstate.edu/services/proctoring/</a>,

**REMINDER:** A passing grade for classes in CS is a C or above. A C- in a CS course is not considered a passing grade toward a CS degree.

# Course Policies:

Makeup Exams – Makeup exams take a considerable effort to schedule, so they will not be given under normal circumstances. If you learn about an event that may cause you to alter your exam scheduling, then contact me and your proctor (or the testing coordinator) as soon as you can so that accommodations can be considered.

**Incompletes** – In this online program, there will rarely be cases where an incomplete is appropriate. I will only consider giving an incomplete grade for emergency cases such as a death in the family, major disease, or child birth, while also having a passing grade. If you have a situation that may prevent you from completing the coursework, let me know as soon as you can.

#### Late work, extra credit, and coursework problems

- Late assignments will not be accepted, but you may have the chance to request re-evaluation of a requirement based on later assignment submissions, (You must explicitly request this in your report on a following assignment before listing the rest of the report requirements)
- I may provide extra credit opportunities during the course, so you can make up lost points by proving you have mastered the topics after they were initially proposed or by showing that you are willing to learn new or advanced topics and apply them to the current coursework topics,
- If you have a problem with a coursework grade, then you must contact your grader (or instructor if the TA is unresponsive) by email within one week of receiving your grade or your request will very likely be ignored.

#### Students with Disabilities:

Accommodations are collaborative efforts between students, faculty, and Disability Access Services (DAS), those with accommodations approved through DAS are responsible for contacting the faculty member in charge of the course prior to or during the first week of the term to discuss accommodations. Students who believe they are eligible for accommodations but who have not yet obtained approval through DAS should contact DAS immediately at 541- 737-4098.

If you have any emergency medical information, then let me know before the end of the first week of classes.

If you have any personal difficulties that are not registered with the DAS, you can still contact me so we can discuss your options.

# **Expectations for Student Conduct:**

Academic Integrity: Students in academic studies are expected to demonstrate their own knowledge and capabilities. This means that a student will be graded on the work that is clearly their own work and that additional materials will be excluded from consideration of the grading of that submission. Work that is not created by the student or cited by the student, but still submitted will be considered plagiarized material and may result in a failed submission and may result in administrative action.

To try to be clear:

- You May openly discuss the presented learning materials and participation category materials at any time with any party as long as they explicitly know that it is for an academic assignment,
- You May openly discuss the demonstration category of coursework and exams category of coursework after grading of the item is complete with any party as long as they explicitly know that it is an academic assignment and that the discussion is accompanied by an explanation of any materials presented,
- You MAY openly discuss the meaning of assignments, general approaches, and strategies with other students in the course; you may do this even before the grading date of the assignment has passed.
- You MAY (and should) use the Internet and other resources to research how to solve a problem, and you should share what you find for others in the course to learn from, but be sure to cite your sources!
- You MAY share source code, but only if it is accompanied by an explanation on how each piece of code works,
- You MUST include a citation in the form of a comment in your source code to indicate the source of any help you received (otherwise you will be claiming that you authored the work, and that is unfair and possibly a misrepresentation of your own direct skills); you should do this even if the source is an instructor or TA. This basically means that a citation will save you from most situations that may get you in trouble with plagiarism, but that I will exclude any work by others from grading consideration,
- You MUST write your own code for your assignments; this means that you should take notes on anything you do with others and use your notes instead of any shared code when working on the assignments at hand. We ?CS people? spend a majority of our time looking at and for patterns, so any simple copying may result in some questions about your code. If you cite your sources, then instead of confronting you about possible plagiarism, we will instead grade you based on the work that you authored.

In this online program we want to encourage collaboration and building upon the work of others in an honest way, this means that instead of strictly disallowing working with others (or their work) we will primarily be using your exams as a gauge of your individual work and the other coursework (labs, assignments, tutorials, quizzes, and lectures) should be viewed as preparatory material for the exams.

We may use plagiarism-detection software check your code against other code-bases, so reduce the likelihood we will use these tools by citing your sources and recreating the desired behavior by recreating the code you learn from (in the very least it will give you more practice)!

If you are found in violation of any of the above policies, whether you are the giver or the receiver of noncited help, you may be given a zero on the assignment, failed from the course, or higher administrative action (Instructor's discretion). The academic dishonesty charge will be documented and sent to your school's dean and the Office of Student Conduct. The first offense may result in a warning; the second offense results in an academic dishonesty charge on your transcript, a disciplinary hearing, and possible expulsion.

Conduct in this online classroom – Students are expected to conduct themselves in a civil manner at all times through any communication media (voice, body language, email, discussion boards, etc.). Students will be expected to treat all others with the same respect as they would want afforded themselves. Disrespectful behavior to others (such as harassing behavior, personal insults, or inappropriate language) or disruptive behaviors (such as persistent and unreasonable demands for time and attention both in and out of the classroom) is unacceptable and can result in sanctions as defined by Oregon Administrative Rules <a href="http://arcweb.sos.state.or.us/pages/rules/oars\_500/oar\_576/576\_015.html">http://arcweb.sos.state.or.us/pages/rules/oars\_500/oar\_576/576\_015.html</a>. (Adapted from statements provided by Becky Warner, SOC)

#### **Communications:**

#### Ground Rules for Online Communication and Participation:

- Online threaded discussions are public messages, and all writings in this area will be viewable by the entire class or assigned group members. If you prefer that only the instructor sees your communication, send it to by email, and be sure to identify yourself and identify the class in the subject line.
- Posting of personal contact information is discouraged (e.g. telephone numbers, addresses, personal websites), but not forbidden.
- Online Instructor Response Policy: I will check email somewhat frequently and will respond to courserelated questions within a day or two if possible.
- Observation of "Netiquette": All your online communications need to be composed with fairness, honesty and tact. Spelling and grammar are very important in an online course. What you put into an online course reflects on your level of professionalism. Here are a couple of references that discuss
  - netiquette: http://www.albion.com/netiquette/corerules.html.
- Check the Announcements area and the course syllabus before you ask general course "housekeeping" questions (i.e. how do I submit assignment 3?). If you don't see your answer there, then please contact someone through chat or discussion boards. (Adapted from Jean Mandernach, PSY)

#### Guidelines for a productive and effective online classroom

- The discussion board is your space to interact with your colleagues related to current topics or responses to your colleague?s statements. It is expected that each student will participate in a mature and respectful fashion.
- Participate actively in the discussions, having completed the readings and thought about the issues.
- Pay close attention to what your classmates write in their online comments. Ask clarifying questions, when appropriate. These questions are meant to probe and shed new light, not to minimize or devalue comments.

- Think through and reread your comments before you post them.
- Assume the best of others in the class and expect the best from them.
- Value the diversity of the class. Recognize and value the experiences, abilities, and knowledge each
  person brings to class.
- Disagree with ideas, but do not make personal attacks. Do not demean or embarrass others. Do not make sexist, racist, homophobic, victim-blaming, or other discriminatory comments at all.
- Be open to being challenged or confronted about ideas or prejudices; do not take challenges personally, even if it seems insulting. (Adapted from a statement provided by Susan Shaw, WS)

# Student Assistance:

#### Getting assistance:

- Your first line of assistance should be to take a break, skim through the book, lectures, notes, and Internet,? If you cannot find the answer yourself after some searching, you should then communicate with your fellow classmates, (remember that I want you to learn the basics in whatever way works best for you!)
- If you and your classmates cannot find a solution, then asking the TAs or I by discussion board or chat would be next,
- Contacting us by email is a poor way to ask a question, not because email is bad, but that questions can usually benefit the whole class,
- Traditional students form study groups for a reason, I strongly encourage you find people to help support you throughout the class and throughout the other classes that you take in our online program,
- I will have virtual office hours based on student needs, but because of the lack of regular use they will be by appointment,
- We have several methods of communicating, but I would prefer we use a discussion board so that we can refer back to our previous discussions and citations and build upon our previous learning.

Technical Assistance – If you experience computer difficulties, need help downloading a browser or plug-in, assistance logging into the course, or if you experience any errors or problems while in your online course, contact the OSU Help Desk for assistance. You can call (541) 737-3474, email osuhelpdesk@oregonstate.edu or visit the OSU Computer Helpdesk online. (you can also clearly ask in discussion with the class and we can try to work through it for the benefit of the class as well!)

**Tutoring** Effective fall term 2009 we went to a new online Tutoring Service - NetTutor to meet the needs of Ecampus students.

NetTutor is a leading provider of online tutoring and learner support services fully staffed by experienced, trained and monitored tutors. Students connect to live tutors from any computer that has Internet access. NetTutor provides a virtual whiteboard that allows tutors and students to work on problems in a real time environment. They also have an online writing lab where tutors critique and return essays within 24 to 48 hours.

# **Course Evaluation:**

I hope to have a location in the discussion boards for evaluation of the course, where any student will be able to, anonymously, make comments, requests, or suggestions in regards to the design and implementation of the course. You may also feel free to email me suggestions at any time.

OSU Student Evaluation of Teaching – Course evaluation results are extremely important and are used to help me improve this course and the learning experience of future students. Results from the multiple choice questions are tabulated anonymously and go directly to instructors and department heads. Student comments on the open-ended questions are compiled and confidentially forwarded to each instructor, per OSU procedures. The online Student Evaluation of Teaching form will be available toward the end of each term, and you will be sent instructions through ONID. You will login to ?Student Online Services? to respond to the online questionnaire. The results on the form are anonymous and are not tabulated until after grades are posted.
