* Questions...

We have learned derivatives. Now we will explore integrals to find the volume of the solid under a surface.

$$a = x_0 < x_1 < \dots < x_n = b$$

$$c = y_0 < y_1 < \dots < y_m = d$$

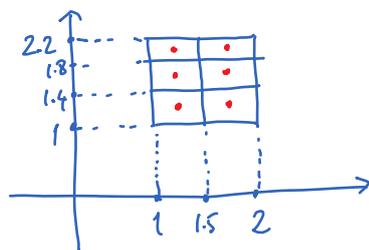

The volume of the green french-fry is about $f(x_i^*, y_i^*) \Delta A$, where $\Delta A = (\Delta x)(\Delta y)$. Therefore, the volume of the solid under the surface is approximately

$$\sum_{i,j} f(x_i^*, y_j^*) \Delta A$$

Ex Find the approximate volume of the solid under the surface

$$f(x,y) = xy$$

and above the rectangle $R = [1,2] \times [1,2]$ with $n=2$ and $m=3$ using the midpoint rule.

$$\Delta A = (0.5)(0.4) = 0.2$$

$$\begin{aligned} \text{Volume} &\approx f(1.25, 1.2) \cdot 0.2 + f(1.25, 1.6) \cdot 0.2 \\ &+ f(1.25, 2.0) \cdot 0.2 + f(1.75, 1.2) \cdot 0.2 \\ &+ f(1.75, 1.6) \cdot 0.2 + f(1.75, 2.0) \cdot 0.2 \\ &\approx 2.88 \dots \end{aligned}$$
