1. Let P_2 be the vector spaces of all polynomials of degree ≤ 2 , with real coefficients. The set $B_0 = \{1, t, t^2\}$ is the standard basis of P_2 . Consider another basis $B = \{2, 1 - t, 2t^2 + 1\}$. Find the coordinate vector of the polynomial $f(t) = -2t^2 - 3t$ in basis B .

$$B_0 = \{\underbrace{1}_{e_1}, \underbrace{t}_{e_2}, \underbrace{t^2}_{e_3}\}$$

$$B = \{\underbrace{2}_{f_1}, \underbrace{1-t}_{f_2}, \underbrace{2t^2+1}_{f_3}\}$$

We want to find $[f]_B$, that is, a column vector $\begin{bmatrix} c_1 \\ c_2 \\ c_3 \end{bmatrix}$ such

$$\text{that } f = c_1 f_1 + c_2 f_2 + c_3 f_3.$$

This equation can be rewritten as

$$-2t^2 - 3t = c_1 2 + c_2 (1-t) + c_3 (2t^2 + 1)$$

$$\text{RHS} = 2c_3 t^2 + (-c_2)t + (2c_1 + c_2 + c_3)$$

For $\text{LHS} = \text{RHS}$ for all t , the coefficients of each power of t must match. Thus,

$$\begin{cases} 2c_3 = -2 \\ -c_2 = -3 \\ 2c_1 + c_2 + c_3 = 0 \end{cases}$$

$$\text{This results in } \begin{cases} c_3 = -1 \\ c_2 = 3 \\ c_1 = -1 \end{cases}$$

$$\text{Therefore, } [f]_B = \begin{bmatrix} -1 \\ 3 \\ -1 \end{bmatrix}.$$

2. Consider a linear map $f : M_{2 \times 2}(\mathbb{R}) \rightarrow M_{1 \times 3}(\mathbb{R})$ given by

$$f\left(\begin{bmatrix} a & b \\ c & d \end{bmatrix}\right) = \begin{bmatrix} a+b & c+d & a+b \end{bmatrix}$$

(a) Find a basis for $\text{null}(f)$. What is its dimension?

(b) Find a basis for $\text{range}(f)$. What is its dimension?

$$\begin{aligned} \text{(a)} \quad \text{null}(f) &= \left\{ \begin{bmatrix} a & b \\ c & d \end{bmatrix} : f\left(\begin{bmatrix} a & b \\ c & d \end{bmatrix}\right) = \begin{bmatrix} 0 & 0 & 0 \end{bmatrix} \right\} \\ &= \left\{ \begin{bmatrix} a & b \\ c & d \end{bmatrix} : \begin{bmatrix} a+b & c+d & a+b \end{bmatrix} = \begin{bmatrix} 0 & 0 & 0 \end{bmatrix} \right\} \\ &= \left\{ \begin{bmatrix} a & b \\ c & d \end{bmatrix} : a+b=0, c+d=0 \right\} \\ &= \left\{ \begin{bmatrix} a & b \\ c & d \end{bmatrix} : b=-a, d=-c \right\} \\ &= \left\{ \begin{bmatrix} a & -a \\ c & -c \end{bmatrix} : a, c \in \mathbb{R} \right\} \\ &= \left\{ a \begin{bmatrix} 1 & -1 \\ 0 & 0 \end{bmatrix} + c \begin{bmatrix} 0 & 0 \\ 1 & -1 \end{bmatrix} : a, c \in \mathbb{R} \right\} \\ &= \text{span} \left\{ \underbrace{\begin{bmatrix} 1 & -1 \\ 0 & 0 \end{bmatrix}}_{A_1}, \underbrace{\begin{bmatrix} 0 & 0 \\ 1 & -1 \end{bmatrix}}_{A_2} \right\} \end{aligned}$$

To check if $\{A_1, A_2\}$ is a basis of $\text{null}(A)$, we need to check if it is linear independent. Consider $c_1, c_2 \in \mathbb{R}$ satisfying

$$c_1 A_1 + c_2 A_2 = 0.$$

This is equivalent to

$$c_1 \begin{bmatrix} 1 & -1 \\ 0 & 0 \end{bmatrix} + c_2 \begin{bmatrix} 0 & 0 \\ 1 & -1 \end{bmatrix} = \begin{bmatrix} 0 & 0 \\ 0 & 0 \end{bmatrix}$$

which is equivalent to

$$\begin{bmatrix} c_1 & -c_1 \\ c_2 & -c_2 \end{bmatrix} = \begin{bmatrix} 0 & 0 \\ 0 & 0 \end{bmatrix}$$

which gives $c_1 = c_2 = 0$. Therefore, $\{A_1, A_2\}$ is linearly independent. It is a basis of $\text{null}(A)$. The dimension of $\text{null}(A)$ is 2.

$$\begin{aligned}
 (b) \quad \text{range}(f) &= \left\{ f\left(\begin{bmatrix} a & b \\ c & d \end{bmatrix}\right) : a, b, c, d \in \mathbb{R} \right\} \\
 &= \{ [a+b \quad c+d \quad a+b] : a, b, c, d \in \mathbb{R} \} \\
 &= \{ [a \quad c \quad a] + [b \quad d \quad b] : a, b, c, d \in \mathbb{R} \} \\
 &= \{ [a \quad 0 \quad a] + [0 \quad c \quad 0] + [b \quad 0 \quad b] + [0 \quad d \quad 0] : \\
 &\quad a, b, c, d \in \mathbb{R} \} \\
 &= \{ a[1 \quad 0 \quad 1] + c[0 \quad 1 \quad 0] + b[1 \quad 0 \quad 1] + d[0 \quad 1 \quad 0] : \\
 &\quad a, b, c, d \in \mathbb{R} \} \\
 &= \{ (a+b)[1 \quad 0 \quad 1] + (c+d)[0 \quad 1 \quad 0] : a, b, c, d \in \mathbb{R} \} \\
 &= \text{span} \left\{ \underbrace{[1 \quad 0 \quad 1]}_{D_1}, \underbrace{[0 \quad 1 \quad 0]}_{D_2} \right\}
 \end{aligned}$$

To check if $\{D_1, D_2\}$ is linearly independent, we consider c_1 and c_2 satisfying $c_1 D_1 + c_2 D_2 = 0$. This eq. is equivalent to

$$c_1 [1 \quad 0 \quad 1] + c_2 [0 \quad 1 \quad 0] = [0 \quad 0 \quad 0]$$

which is equiv. to

$$[c_1 \quad c_2 \quad c_1] = [0 \quad 0 \quad 0]$$

which is equiv. to

$$\begin{cases} c_1 = 0 \\ c_2 = 0 \end{cases}$$

Therefore, $\{D_1, D_2\}$ is a basis of $\text{range}(f)$. The dimension is 2.
