

Assume the master initiated this transfer...

- 1 [2] What is the address of device the master is talking to? _____ (hex)
- 2 [2] Is it a read or write transfer? _____
- 3 [2] Did the device recognize its address? _____
- 4 [2] If the device responded, what was the data transferred? _____ (hex)
- 5 [2] Did the transaction conclude successfully? _____

Assume the master initiated the transfer...

- 6 [12] Describe what happens in this scenario. Include all information as in #1-5 plus anything else needed to fully describe the transactions.

7 [4] How can the master talk to multiple devices at once?

- 8 [4] Given that T_{PS1} & T_{PS2} in TWCR are 0,0; what value would be read from TWCR following a SLATW when an acknowledge is not received?

(hex)
